Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## EXECUTIVE SUMMARY

### Overview

The Florida Commission for the Transportation Disadvantaged (CTD) supports the coordination of transportation services for individuals who are transportation disadvantaged (TD) due to age, disability, or low income. CTD accomplishes this purpose largely through its Trip and Equipment Grant program, which allocates funding to Florida's 67 counties to deliver transportation services to eligible TD riders. The program is established in Rule Chapter 41-2.014, Florida Administrative Code (F.A.C.).

In State Fiscal Year (FY) 2019-2020, CTD contracted with Thomas Howell Ferguson (THF) to conduct an in-depth study to explore changes to the methodology used to allocate funds from the Trip and Equipment Grant. The study was also intended to assist stakeholders of the Coordinated Transportation Disadvantaged System to gain a more thorough understanding of the methodology and better prepare for future changes to the TD program. The study included three objectives:

1. An in-depth analysis of the data used within the methodology, including an examination of the impact of potential changes to each of the variables of the funding formula;
2. Public workshops for CTD to gather input from stakeholders on funding models for future consideration; and
3. A final report that summarizes the findings from the analysis, input received from stakeholders during the public workshops, and proposed changes to the allocation methodology to be implemented in rule, beginning July 1, 2021.

This report fulfills the third objective of the study. It includes all information that was originally published in the initial analysis report (first objective) and a thorough summary of the feedback received during the three public workshops (second objective) on funding models being explored by the study. The final report concludes with recommendations for CTD to consider in implementing changes to the allocation methodology.

### Current Funding Methodology

Each fiscal year, the Florida Legislature appropriates, and the Governor approves, funding for the Trip and Equipment Grant. CTD then allocates grant funds to each county's Community Transportation Coordinator (CTD) to deliver TD services for the year, beginning on July 1. The current allocation methodology was established in Rule 41-2.014(5), F.A.C., in 1999. It consists of two funding components:

- 1) **Base Funding** – The methodology allocates a base level of funding to all counties, based on their equivalent amounts that were allocated in FY 1999-2000, to maintain a certain threshold of service stability from year-to-year.
- 2) **Formula Funding** – Remaining funds are allocated based on four variables (equally weighted at 25%) within a statistical formula that measures a county's inherent demand and performance in serving the TD population:
  - I. Total county population (demand), captured by the U.S. Census Bureau;
  - II. Total county area in square miles (demand), captured by the U.S. Census Bureau;

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

- III. Total system passenger trips (performance), captured by the county's Annual Operating Report (AOR); and
- IV. Total system vehicle miles traveled (performance), captured by the county's AOR.

It is important to distinguish between the allocation and disbursement of funding. The grant funds are not actually disbursed (i.e., paid) until after services are rendered by the CTC. The CTC must submit a monthly invoice to CTD, which includes data on trips that were provided to TD riders, to be reimbursed under the Trip and Equipment Grant.

The Trip and Equipment Grant funds are intended to support transportation services not funded (i.e., "sponsored") by any other agency or program, such as Medicaid. The AOR is a comprehensive report of local systems in all 67 counties, which includes not only "non-sponsored" trips funded under the Trip and Equipment Grant but also "sponsored" trips funded by other agencies. Though grant funds currently are allocated in part based on systemwide trips and miles reported in the AOR, those funds may only reimburse for non-sponsored transportation to TD eligible riders.

**Study Findings and Proposed Changes**

The study considers amending or adding four variables within the Trip and Equipment Grant allocation methodology. Each of these variables use more precise or up-to-date estimates or measures of demand, performance, and base funding:

1. **TD Eligible Population** – While the current methodology accounts for total population (including individuals who are not transportation disadvantaged), the study explores the U.S. Census Bureau's American Community Survey 5-year estimates to consider allocating funding more directly to a county's TD eligible population (individuals living with a disability, persons living below poverty, and adults who are 65 or older).
2. **Centerline Miles (CLM)** – The study considers public road mileage data from the Federal Highway Administration as an alternative variable to county square miles. This would serve as a more precise measurement of a county's overall demand for transportation services by considering the miles traveled by residents to access activities within their community. Specifically, the study explores models where allocations could be distributed based on a county's share of statewide centerline miles.
3. **Trip and Equipment Grant ("Non-Sponsored") Services** – The current methodology measures performance of CTD funded services, but also accounts for systemwide trips and miles reported in the AOR. At a more granular level, the study considers more directly allocating funds for the provision of non-sponsored TD services, which are reimbursed by the Trip and Equipment Grant program. The study examines invoice data submitted by CTCs on "non-sponsored" services as an alternative (and more consistent) measurement of performance.
4. **Base Funding** – While the current methodology provides a stabilizing component in the form of an absolute amount (i.e., a county's base amount from FY 1999-2000), it does not provide a minimum threshold of loss a county can anticipate from one year to the next. The study considers an alternative approach by updating the base amount each year based on a percentage threshold of

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

the county's total allocated amount from the year immediately prior. The study also considers simplifying this approach by adding it as a variable within the formula.

The study explores scenarios where the datasets can be applied (and adjusted using varying weights) in determining a county's share for each of these variables. The study presents three models for consideration, with varying weighted totals and statewide shares by variable. All models weigh the base variable at 50% to ensure a certain level of stability in funding from year-to-year.

Model	Demand Variables (TD + CLM)	Performance Variable	Base Variable	Description
Model 1	25% (12.5% + 12.5%)	25%	50%	"Status Quo" approach, uses similar balance of demand and performance, just with different datasets.
Model 2	12.5% (6.25% + 6.25%)	37.5%	50%	Performance-driven approach, where more weight is given to the prior year's performance in Trip and Equipment services.
Model 3	37.5% (18.75% + 18.75%)	12.5%	50%	Demand-driven approach, where more weight is given to the county's TD eligible population and CLM.

These models use the most recent year of data available for the variable; however, CTD could consider using a different year of data in response to extraordinary circumstances, such as the impact on Trip and Equipment invoice data due to the COVID-19 pandemic in 2020.

### **Summary of Stakeholder Feedback**

CTD published the initial analysis report of this study on June 2, 2020, and encouraged stakeholders to begin providing feedback through a dedicated website at: <https://ctdallocationstudy.com/>. CTD then hosted three public workshops via GoToMeeting webinar and telephone conference on June 26, July 28, and August 7, 2020. All workshops were advertised in the Florida Administrative Register, available to all members of the public pursuant to Florida's Government in the Sunshine Law, and all information was recorded and posted on the CTD Allocation Study website.

Below is a summary of stakeholder feedback on each of the variables proposed by the study.

**TD Eligible Population** – Most of the feedback was supportive of the use of the TD eligible population (instead of general population) as a variable within the allocation methodology.

**Centerline Miles** – Several stakeholders representing smaller counties raised concerns about the use of centerline miles as a second demand variable disproportionately favoring larger counties that have more miles of public roads. Some requested this be removed from consideration. The July 28 workshop was dedicated to responding to this feedback. This included an analysis of the impact on allocations by the removal of this variable, which would overwhelmingly have a negative impact on smaller counties based on their population size. This is further explored on page 69.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

**Performance** – Most of the feedback on performance related to the proposed weightings of the invoice data (trips, miles, and bus passes), which were based on the average rates CTCs are reimbursed under the Trip and Equipment Grant. There was also debate over the use of the AOR within the formula, which the study proposes replacing with the invoice data. The August 7 workshop was dedicated to addressing this feedback, which is summarized below:

- **Mileage** – The study considers weighing the miles at one-tenth the amount for an equivalent type of trip. Some stakeholders supported this level of weighting, while others requested this be given more weight to consider the costs associated with providing longer distance trips, both for rural systems that have to travel to neighboring counties to access certain activities and for urban systems that have to use TD funds to travel outside the fixed-bus route corridor.
- **Bus Passes** – CTD purchases bus passes to subsidize the fare of TD eligible riders to access the fixed-route system, whenever available. Bus passes generally are reimbursed based on the number of days – ***NOT*** number of trips – allotted for riders. Some stakeholders representing fixed-route systems argued this disincentivizes the use of bus passes by not counting the actual trips and miles. The study refutes this claim by demonstrating the proposed weights for bus passes are significantly higher than their equivalent rate of reimbursement (see page 87).
- **AOR** – Some stakeholders supported the study’s recommendation to replace the AOR with Trip and Equipment Grant invoice data within the allocation methodology, citing the lack of credible, accurate data reflected in the AOR. Other stakeholders argued that the removal of data on trips and miles not funded under the Trip and Equipment Grant would penalize CTCs that work with coordination contractors and other purchasing agencies. This report maintains the position that the AOR is not a reliable source of data to measure performance and the allocation methodology should only account for trips (and miles and bus passes) that are eligible for reimbursement under the Trip and Equipment Grant.

**Base** – Most of the feedback was supportive of the use of a base variable within the allocation formula to provide stability from year to year. Some stakeholders requested the inclusion of a “floor” and “cap” to prevent a certain percentage of loss or gain in allocations during the first few years of implementation. This report recommends an alternative “phase-in” approach, where the base variable can be adjusted for the first year to allow systems time to transition into the new formula (see Recommendation 3).

In addition to this feedback, several stakeholders representing CTCs that operate fixed-route systems requested the Commission rescind its policy on ADA complimentary paratransit services within the fixed-route corridor, which are not eligible for reimbursement under the Trip and Equipment Grant. Other stakeholders representing systems that do not operate a fixed-route system requested CTD remove bus passes from consideration of the allocation formula. These requests pertain to the reimbursement process of the Trip and Equipment Grant, which is beyond the scope of this study.

### **Recommendations for Implementation**

Based on the findings from the study and much of the feedback received from stakeholders, this report includes the following five recommendations:

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**RECOMMENDATION 1** – The Commission for the Transportation Disadvantaged should amend the Trip and Equipment Grant allocation methodology in Rule 41-2.014(5), F.A.C., to include the four variables proposed by this study, effective July 1, 2021.

**RECOMMENDATION 2** – To reward and incentivize performance and the cost-effective provision of TD non-sponsored services, the Commission should implement a model that gives greater weight to the proposed performance variable reflected in the Trip and Equipment Grant invoice data and less weight to the proposed inherent demand variables of TD Population and Centerline Miles (CLM). Also, to provide more year-over-year stability and predictability of funding, the same model should give a majority of its weight to the base funding variable reflected in allocation amounts from the year immediately prior.

**RECOMMENDATION 3** – To ensure a smooth transition of the new formula, the Commission should phase-in the implementation by weighing the base variable at 80% for the first year. This will allow sufficient time for CTCs to adjust to the new changes and for CTD to explore additional policy changes pertaining to performance of the Trip and Equipment Grant (discussed in Recommendation 5).

**RECOMMENDATION 4** – When developing rule language, the Commission should allow for flexibility in determining the year of data used in each variable in determining allocations for each fiscal year. Though the most current year of data should be the common practice, there may be external events in any given year that would adversely impact allocations, such as a global pandemic or hurricane. Under these circumstances, the rule language should allow for the Commission to use data from a different year not affected by extraordinary events.

**RECOMMENDATION 5** – In addition to implementing a formula that prioritizes performance, the Commission should examine its existing policies and procedures pertaining the reimbursement of grant funds to ensure they align with the intent of the new allocation methodology. This should include an in-depth analysis of invoice data, rate structures, and potential improvements to the Annual Operating Report.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## INTRODUCTION

The Florida Commission for the Transportation Disadvantaged (CTD) is an independent state agency administratively assigned to the Florida Department of Transportation (FDOT) that reports directly to the Governor. CTD functions independently of the control, supervision, and direction of FDOT. The Florida Legislature established CTD to accomplish the coordination of transportation services provided to the transportation disadvantaged (TD) population. The authority of CTD is derived from Chapter 427, Florida Statutes, and Rule Chapter 41-2, Florida Administrative Code.

The TD population is comprised of individuals falling into one or a combination of the following four groups:<sup>1</sup>

- Older Adults
- Persons with Disabilities
- People with Low Income
- At-Risk Children<sup>2</sup>

Individuals falling into one or more of these groups who cannot obtain their own transportation due to their age, disability, or income are eligible to receive transportation services funded through CTD so that they may access medical services, work opportunities, educational opportunities, groceries, and other activities essential to achieving personal independence.

### **Coordinated Transportation System**

CTD's ultimate purpose—as laid out in Florida Statutes—is “to assure the cost-effective provision of transportation by qualified CTCs or transportation operators.”<sup>3</sup> Community Transportation Coordinators (CTCs) contract with CTD to coordinate the provision of transportation services in every county in Florida. “Coordination” is specifically defined in Chapter 427 as the “arrangement for the provision of transportation services to the transportation disadvantaged in a manner that is cost-effective, efficient, and reduces fragmentation and duplication of services.”<sup>4</sup>

CTD is guided by a philosophy of centralized policy development and decentralized local implementation. To fulfill its statutory obligations, CTD develops policies and procedures for the coordination of transportation services for the TD population, and contracts with CTCs (typically for up to 5 years) to ensure the provision of transportation services at the local level. While CTD establishes guidelines for TD eligibility within the parameters laid out in Florida Statutes, specific eligibility policies are ultimately determined at the local level within such guidelines.

A CTC is responsible for providing and/or contracting for transportation services at the local level. Services may include: paratransit services (which are usually pre-scheduled), door-to-door trips provided on a multi-

### Fiscal Year 2020

passenger vehicle, on-demand trips (where the CTC may subcontract with a taxi-cab or transportation network company to deliver one-on-one trips), and/or bus pass programs (if the CTC operates a fixed bus route). CTCs plan, administer, monitor, coordinate, arrange, and deliver coordinated TD services originating in their designated service areas. Designated service areas for a CTC consist of one or multiple counties, but never parts of any county. Some of the core functions performed by a CTC include:

- Operating a centralized call center
- Scheduling trips
- Gatekeeping duties
- Invoicing purchasing agencies
- Preparing and submitting an annual operating report to CTD
- Determining specific eligibility criteria and trip prioritization for non-sponsored TD trips

The Transportation Disadvantaged Trust Fund (TDTF)<sup>5</sup> funds the majority of CTD services for eligible individuals through the Trip and Equipment Grant program. Transportation funded from the TDTF are considered “non-sponsored” services, meaning such services “are not sponsored or subsidized by any funding source other<sup>6</sup> than the Transportation Disadvantaged Trust Fund.”<sup>7</sup> In order for an eligible individual to qualify for TDTF services, he or she must, at minimum, demonstrate no availability of any other funding or reimbursement (including self-pay), and no means of any other transportation (including public transit). For example, an eligible individual may be enrolled in Medicaid and receive “sponsored” trips to medical appointments covered under Florida’s Medicaid Managed Medical Assistance (MMA) program; however, there may not be a similar funding source for that same individual to access grocery shopping and other life-sustaining activities, where such trips could be reimbursed using TDTF monies.

A CTC may provide “sponsored” transportation to TD individuals with the support of alternative funding sources from other “purchasing agencies.” In addition to Medicaid MMA, some common examples of purchasing agencies include programs at the Agency for Persons with Disabilities and the Department of Elder Affairs. CTCs that operate fixed bus route services may also serve certain groups within the TD population, such as individuals with disabilities who qualify for complementary paratransit services<sup>8</sup> under the U.S. Americans with Disabilities Act (ADA). All of these services, which currently fall under the “coordinated system,” are captured within the county’s annual operating report (AOR), which is compiled by the CTC and submitted to CTD for publication in its statewide annual performance report.<sup>9</sup>

---

<sup>5</sup> Section 427.0159, Florida Statutes

<sup>6</sup> Other funding sources are commonly referred to as “purchasing agencies,” and include other local, state, and federal programs and agencies.

<sup>7</sup> Section 427.011(12), Florida Statutes

<sup>8</sup> The ADA requires operators of fixed bus services to provide complimentary, door-to-door paratransit services to individuals with disabilities who cannot access the fixed route. CTD does not subsidize these services as they are considered a “civil right” mandated by federal law. However, TDTF funds may be used to purchase paratransit trips that go outside the identified complementary ADA paratransit service corridor and/or do not occur during the hours of operation for the fixed route, which are not afforded under the ADA.

<sup>9</sup> The CTD 2019 Annual Performance Report can be accessed here: [https://ctd.fdot.gov/docs/AORAPRDocs/2018-19\\_APRFinalDocument.pdf](https://ctd.fdot.gov/docs/AORAPRDocs/2018-19_APRFinalDocument.pdf).

## Funding Allocation Study

### Fiscal Year 2020

#### **CTD's Trip and Equipment Grant Program**

As mentioned above, the majority of funds within the TDTF are allocated and disbursed through the Trip and Equipment Grant Program. Funding for the program is subject to annual appropriation by the Florida Legislature and with the Governor's approval. CTD then allocates the funds for each county to support the delivery of non-sponsored TD services<sup>10</sup> in the respective state fiscal year, beginning on July 1. The allocated funds are available to each CTC for its designated service area (county or counties), which is established through a grant agreement with CTD. The CTC is reimbursed with the allocated funds after TD services are rendered for the month and certain documentation is submitted to CTD through invoices. In essence, the allocated funds for a service area represent the funds available in that area for reimbursement of TD services in the Trip and Equipment Grant program.

In the 1990s, CTD established a methodology to allocate funds from the Trip and Equipment Grant within Rule Chapter 41-2.014, Florida Administrative Code (F.A.C.).<sup>11</sup> The current methodology, which was last updated in State Fiscal Year (SFY) 1999-2000, consists of two major components that determine each county's allocation: 1) "Base Funding," where each county is allocated, upfront, an equivalent amount to its allocation from SFY99-00; and 2) a formula that allocates the remaining funds based on four variables, weighted equally at 25% each, of a county's service area:

- Total county square miles;
- Total county population;
- Total passenger trips reported in the county's AOR; and
- Total vehicle miles traveled for the provision of passenger trips in the county's AOR.

This report examines these components and variables in more detail and explores how each component could be revised to improve on the existing methodology. The following section provides a summary of events that led to the publication of this report, necessitating the CTD to explore changes to the current methodology.

#### **Recent Changes to the Trip and Equipment Grant Allocation Methodology**

In 2016, the Florida Legislature directed CTD to explore historical funding and formulas for the allocation of TDTF funds. CTD contracted with the Center for Urban Transportation Research (CUTR) at the University of South Florida to conduct a study to explore changes to the Trip and Equipment Grant allocation methodology pursuant to legislative direction. The study recommended the following changes:

- Adjust Base Funding to establish "jurisdictional equity," where all counties would receive an equal base allocation
- Revise the variable of county population to specifically account for the county's TD population and remove the variable accounting for county square miles
- Adjust the weights given to the variables of passenger trips (20%) and vehicle miles (40%) reported within the county's annual operating report.

---

<sup>10</sup> Up to 25% of the grant may also be used to purchase capital equipment to deliver such services

<sup>11</sup> The rule can be accessed on the Florida Department of State website at:  
<https://www.flrules.org/gateway/ruleNo.asp?id=41%E2%80%92014>.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

The Legislature directed CTD to implement these changes through legislative proviso within the General Appropriations Acts of 2017-18 and 2018-19. Though these changes impacted certain local CTCs, it did not appear the new methodology had a significant impact on a statewide basis. Therefore, the Legislature did not include these changes in the General Appropriations Act of 2019-20, which resulted in a return to the original methodology established in CTD Rule.

In June 2019, CTD announced a notice for development of rulemaking to explore changes to the Trip and Equipment Grant allocation methodology and other grant programs administered within Chapter 41-2.014, F.A.C.

Shortly after the start of SFY19-20, several local systems experienced a reduction of TD services due to financial losses resulting from the changes in the Trip and Equipment allocation methodology.<sup>12</sup> On November 25, 2019, the Commission voted to “hold harmless” and restore funding to the counties that experienced a decrease in their allocations to prevent further reduction of services for the fiscal year. CTD also announced it would conduct an independent, in-depth analysis of the methodology to facilitate an informative and inclusive process as part of rule development. During the 2020 Legislative Session, the Florida Legislature included \$4.5 million in non-recurring funding within the General Appropriations Act of 2020-21, if approved by the Governor, to continue the “hold harmless” funding for another fiscal year while CTD completes its rule development process.

Insightful consideration of potential impacts resulting from any changes to the allocation methodology is essential. Some of the lessons learned from the back-and-forth transition of methodologies include the need for stakeholders to gain a deeper and more thorough understanding of the methodology—including how each factor within the formula contributes to the final allocation—to better prepare for changes to the program from year to year. Further, changes to the methodology should clearly be guided by a set of principles to ensure consistency with the fundamental purpose of the program. Though any changes to the allocation methodology will result in gains and losses compared to the status quo, it is important that the overriding consideration be to the quantity and quality of transportation available to Florida’s TD population in every area of the state. The next section discusses the scope of this study and how it intends to build upon these lessons learned.

---

<sup>12</sup> This was especially the case with certain rural systems that also received non-recurring funds in addition to their Trip and Equipment allocation the previous two fiscal years. This short-term funding was intended to assist these systems from the loss of funding from Medicaid when it transitioned to managed care in SFY 2014-15.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## SCOPE OF FUNDING ALLOCATION STUDY

In December 2019, CTD sought out an independent consultant through its state term contract to assist in exploring changes to the Trip and Equipment Grant funding allocation methodology within Rule Chapter 41-2.014, F.A.C. CTD selected Thomas Howell Ferguson P.A. (THF) as the vendor based on its familiarity with the program through the Quality Assurance contract and a previous study THF conducted on the TD Rate Model. THF and CTD identified the following objectives to accomplish through this study:

1. Conduct an in-depth analysis of the data used within the methodology, including an examination of the impact of potential changes to each of the components;
2. Facilitate stakeholder workshops to gather input on funding models for future consideration; and
3. Develop a final report that summarizes the findings from the analysis, input received from stakeholders, and proposed changes to the formula to be implemented in rule, beginning July 1, 2021.

This final report fulfills the third objective of the study. It summarizes the findings from the initial report and input received from stakeholders, and presents proposed changes to the current allocation methodology to be implemented in rule, beginning July 1, 2021. This report and accompanying material are posted on a website that has been dedicated to this study from the beginning: <https://ctdallocationstudy.com/>.

### **Guiding Principles of the Study**

Developing an effective allocation methodology requires balancing a variety of trade-offs and competing priorities. Funding has an impact on individual riders, transportation provider organizations, planners and administrators, elected and appointed officials, and taxpayers, each with their own point of view on what changes are needed to ensure the program's success. To balance the priorities of these different stakeholders, it is helpful to establish a set of guiding values that describe the goals of the program and offer a framework in which various proposed changes to the funding methodology can be evaluated.

CTD identified the following guiding principles to provide a framework for the funding allocation study. These principles are intended to ensure the considered changes to the existing methodology align with the goals of the Transportation Disadvantaged program.

**ACCESS** – *The purpose of the Commission is to ensure individuals who are transportation disadvantaged (due to disability, low income, or age) have access to activities in the community. A funding model should be built on an understanding of the customers' needs and what systematic barriers and gaps exist, where every dollar is maximized to enhance access.*

**INNOVATION** – *While "access" is a universal goal shared by all customers of the Coordinated System, the solutions to achieve that goal will vary by individual and community. The system must continually innovate in order to find the solutions that best meet the ever-changing needs of the customer. Yet "innovation" is a difficult term to define and put in practice. One expert described the process of innovation as: "Turning an idea into a solution that adds value to the customer."<sup>13</sup>*

---

<sup>13</sup> <https://www.ideatovalue.com/inno/nickskillicorn/2016/03/innovation-15-experts-share-innovation-definition/#nicks>

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

*A funding model should allow for a certain degree of autonomy for local systems to test for and apply new ideas in their service design.*

**COORDINATION** – *Chapter 427, Florida Statutes, directs the Transportation Disadvantaged program and its provider network to coordinate with other purchasing agencies to deliver “cost-effective” transportation to customers. A new funding formula should encourage purchasing agencies to collaborate with the coordinated system in serving mutual customers, whenever possible.*

**ACCOUNTABILITY** – *While the system should allow for local autonomy in using funds to design services that best meet their customers’ needs, it should also have mechanisms in place to ensure funding is fulfilling the purposes set forth by the state. A funding model should include appropriate performance measures, accompanied by a reporting system, to hold local systems accountable to the state taxpayers.*

**TRANSPARENCY** – *A funding model that is transparent promotes trust and accountability across the system. This can be achieved by making information on payments and services readily available and understandable to all stakeholders.*

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## **CURRENT ALLOCATION METHODOLOGY**

The “Introduction” section of this report provided a brief overview of the current methodology used to allocate funds for the CTD Trip and Equipment Grant program. This section of the report provides a more in-depth examination of each component that makes up the methodology, including how each variable mathematically determines the allocation for a county.

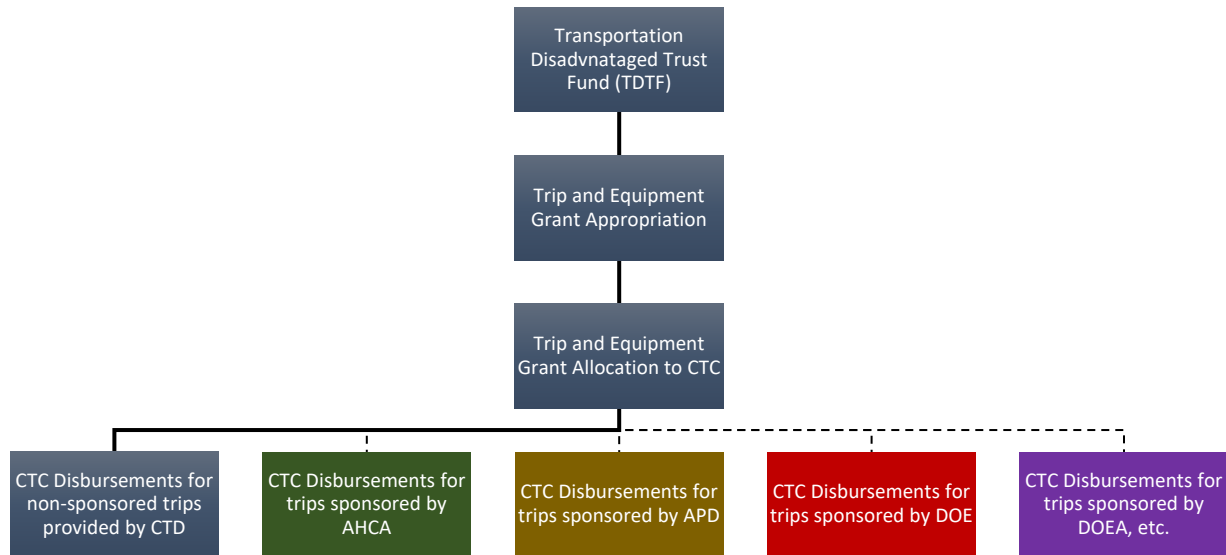

Before reviewing the CTD program’s current allocation methodology, however, it is important to distinguish the difference between how Trip and Equipment Grant funds are allocated on the frontend versus how the same funds are ultimately disbursed on the backend. In making this distinction, it helps to understand the difference between “sponsored” trips and “non-sponsored” trips.

### **Allocations vs Disbursements**

Each county’s total annual allocation is determined by the methodology established in Rule Chapter 41-2, F.A.C. This methodology—which is the focus of this report—determines the total amount of funding made available (the allocations) per county. Allocations are determined from a base amount and a combination of a county’s share of statewide totals for square miles, population, and trips and miles reported in the program’s Annual Operating Report (AOR). The AOR is a comprehensive report of local systems in all 67 of Florida’s counties, and includes not only “non-sponsored” TDTF funded trips, but also “sponsored” trips reimbursed by separate purchasing agencies such as the Agency for Healthcare Administration (AHCA), the Agency for Persons with Disabilities (APD), the Department of Elder Affairs (DOEA), and others.

Once the total allocation is determined for a county through the methodology, CTD issues a Trip and Equipment Grant to the respective CTC operating in that county. A monthly disbursement schedule is established and included in the grant agreement to ensure that services for non-sponsored trips are provided throughout the grant year. The CTC submits monthly invoices to CTD for non-sponsored trips provided to eligible TDTF riders. These invoices include detailed trip information per rider. Only non-sponsored trips (trips not provided by another program or agency outside of CTD) are eligible to receive reimbursement through Trip and Equipment Grant funds. Sponsored trips are reimbursed through separate programs provided by other state, federal, and local entities.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

### **Allocation Methodology**

In reviewing the Trip and Equipment Grant program’s current allocation methodology, it is helpful at the outset to reiterate the methodology as consisting of two core components: 1) Base Funding and 2) Formula Funding. The methodology begins with the Base Funding, which was instituted “to maintain system and service stability.”<sup>14</sup> After Base Funding is determined, all remaining funds are allocated according to a formula that captures certain variables. In essence, the Base Funding exists to provide a level of predictability to allocation amounts—or funding—from one year to the next, while the Formula Funding exists to ensure that TDTF dollars are allocated at least in part according to where TD services appear to be most needed or have the most impact.

### **Inputs and Weights**

As discussed in the “Introduction” section of this report, funding for the Trip and Equipment Grant program is subject to annual appropriation by the Florida Legislature and with the Governor’s approval. The total appropriation for the program in state fiscal year (SFY) 2019-2020 amounted to \$52,216,435.23.<sup>15</sup> Pursuant to the current allocation methodology in Rule Chapter 41-2.014, F.A.C., \$22,169,939.30 of this total was

<sup>14</sup> Rule Chapter 41-2.014(5)(a), Florida Administrative Code (F.A.C.). The rule can be accessed on the Florida Department of State website at: <https://www.flrules.org/gateway/ruleNo.asp?id=41%E2%80%92014>.

<sup>15</sup> This amount was prior to the “hold harmless” funding that was applied to the counties that experienced a decrease in their allocations from the previous year when the methodology changed between SFY 2018-2019 and 2019-2020.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

set aside for “Base Funding”<sup>16</sup> where each county is allocated, upfront, an equivalent amount to its allocation from SFY 1999-2000. This left a remaining total of \$30,047,495.93 to be allocated among the counties according to the existing formula, which weights each county’s statewide share of the following categories 25% each:<sup>17</sup>

- Total area in square miles
- Total population
- Total systemwide (AOR) passenger trips provided
- Total systemwide (AOR) vehicle miles traveled in the provision of passenger trips

As an example of how a county’s allocation is calculated under the current methodology, see Alachua County’s figures in the table below.

COUNTY	BASE FUNDING	FORMULA FUNDING (METHODOLOGY INPUTS)				FINAL T&E GRANT ALLOCATION
	1999-2000	CENSUS 2017		AOR 2017-2018		
	TDTF ALLOCATION	Square Miles	Population	Trips	Miles	
Alachua	\$ 314,216.00	902	259,865	88,740	1,129,073	\$ 650,820.54
STATEWIDE	\$ 22,168,939.30	54,157	20,278,447	22,514,853	99,057,595	\$ 52,216,435.23

Alachua starts with a base allocation amount of \$314,216.00, which is equivalent to its base allocation amount in SFY 1999-2000. As mentioned above, the total SFY 1999-2000 base allocation amount for all 67 counties totals \$22,168,939.30. Alachua County’s share of the remaining \$30,047,495.93 in funds is calculated:

$$\begin{aligned}
 &\textbf{STATEWIDE FORMULA FUNDING:} && \$30,047,495.93 * \\
 &\textbf{SHARE OF SQUARE MILES:} && [(25\% * 902 \div 54,157) \\
 &\textbf{SHARE OF TOTAL POPULATION:} && + (25\% * 259,865 \div 20,278,447) \\
 &\textbf{SHARE OF AOR TRIPS:} && + (25\% * 88,740 \div 22,514,853) \\
 &\textbf{SHARE OF AOR MILES:} && + (25\% * 1,129,073 \div 99,057,595)] \\
 &\textbf{ALACHUA TOTAL:} && = \$336,604.54
 \end{aligned}$$

This total share of \$336,604.54 is added to the SFY 1999-2000 base allocation amount of \$314,216.00 for a total allocation of \$650,820.54 in SFY 2019-2020.

<sup>16</sup> Rule 41-2.014(4), F.A.C.

<sup>17</sup> Rule 41-2.014(5), F.A.C.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**Effective Total Distributions**

By structuring the methodology and formula in this manner, the program effectively allocates a statewide amount of \$7,511,873.98 for each of the four categories that make up the allocation formula, since 25% of \$30,047,495.93 = \$7,511,873.98. Therefore, each county's share of a category's metric translates to its share of the statewide amount of \$7,511,873.98 effectively dedicated toward that same metric. Again, to take the example of Alachua County, its share of each category can be calculated:

$$\begin{aligned}
 \text{SHARE OF SQUARE MILES:} & \quad (\$7,511,873.98 * 902 \div 54,157) \\
 \text{SHARE OF TOTAL POPULATION:} & \quad + (\$7,511,873.98 * 259,865 \div 20,278,447) \\
 \text{SHARE OF AOR TRIPS:} & \quad + (\$7,511,873.98 * 88,740 \div 22,514,853) \\
 \text{SHARE OF AOR MILES:} & \quad + (\$7,511,873.98 * 1,129,073 \div 99,057,595) \\
 \text{ALACHUA TOTAL:} & \quad = \$336,604.54
 \end{aligned}$$

Alachua's share of square miles is equal to  $902 \div 54,157$ , which translates to its share of the \$7,511,873.98 dedicated to square miles being **\$125,112.36**. Its share of total population is equal to  $259,865 \div 20,278,447$ , which translates to its share of the \$7,511,873.98 dedicated to total population being **\$96,263.44**. Its share of AOR trips is equal to  $88,740 \div 22,514,853$ , which translates to its share of the \$7,511,873.98 dedicated to AOR trips being **\$29,607.29**. Finally, its share of AOR miles is equal to  $1,129,073 \div 99,057,595$ , which translates to its share of the \$7,511,873.98 dedicated to AOR miles being **\$85,621.44**.

$$\$125,112.36 + \$96,263.44 + \$29,607.29 + \$85,621.44 = \$336,604.54$$

Once again, this total share of \$336,604.54 is added to the SFY 1999-2000 base allocation amount of \$314,216.00 for a total allocation of \$650,820.54 in SFY 2019-2020.

COUNTY	BASE FUNDING	FORMULA FUNDING (TOTAL DISTRIBUTIONS)				FINAL T&E GRANT ALLOCATION
	1999-2000	CENSUS 2017		AOR 2017-2018		
	TDTF ALLOCATION	Square Miles	Population	Trips	Miles	
Alachua	\$ 314,216.00	\$125,112.36	\$96,263.44	\$29,607.29	\$85,621.44	\$ 650,820.54
TOTAL	\$ 22,168,939.30	7,511,873.98	7,511,873.98	7,511,873.98	7,511,873.98	\$ 52,216,435.23

**Per Input Allocations**

Knowing and understanding the effective total distributions makes it possible to then calculate the total amount allocated for each individual unit in each of the four categories that make up the allocation formula. This measure of per input allocations is significant in that it is the effective value that the allocation formula places on each unit. Given the statewide nature of the allocation formula, the value placed on each unit is the same statewide as it is in each county. Continuing with the example of Alachua County, each per input allocation, or value, is calculated:

$$\begin{aligned}
 \text{VALUE PER SQUARE MILE:} & \quad \$125,112.36 \div 902 = \$138.71 \\
 \text{VALUE PER PERSON:} & \quad \$96,263.44 \div 259,865 = \$0.37
 \end{aligned}$$

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**VALUE PER AOR TRIP:**  $\$29,607.29 \div 88,740 = \$0.33$   
**VALUE PER AOR MILE:**  $\$85,621.44 \div 1,129,073 = \$0.08$

Statewide, each per input allocation, or value, is calculated with the same result:

**VALUE PER SQUARE MILE:**  $\$7,511,873.98 \div 54,157 = \$138.71$   
**VALUE PER PERSON:**  $\$7,511,873.98 \div 20,278,447 = \$0.37$   
**VALUE PER AOR TRIP:**  $\$7,511,873.98 \div 22,514,853 = \$0.33$   
**VALUE PER AOR MILE:**  $\$7,511,873.98 \div 99,057,595 = \$0.08$

COUNTY	BASE FUNDING	FORMULA FUNDING (PER INPUT ALLOCATIONS)				FINAL T&E GRANT ALLOCATION
	1999-2000	CENSUS 2017		AOR 2017-2018		
	TDTF ALLOCATION	Square Miles	Population	Trips	Miles	
Alachua	\$ 314,216.00	\$138.71	\$0.37	\$0.33	\$0.08	\$ 650,820.54
TOTAL	\$ 22,168,939.30	\$ 138.71	\$ 0.37	\$ 0.33	\$ 0.08	\$ 52,216,435.23

Put simply: this demonstrates the value, or dollar amount, placed on each category of the current allocation formula. It values \$0.33 per trip reported in the AOR, \$0.37 per resident in the county, etc. As this report explores alternative ways of determining a county's allocation, it is important to recognize the value of each unit can be altered as well.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## DATASETS

In addition to understanding how each of the categories calculate the total allocation, it is important to examine the data sources used within each of these categories. Integrity of the data input into the allocation methodology is a prerequisite for integrity of the results output by the calculations. This section includes an exploration of four primary sources of data that are or could be incorporated into the Trip and Equipment program allocation methodology. These datasets—two for estimating inherent demand for TD services and two for estimating or measuring the CTCs’ performance in providing TD services—are used throughout this report. The data sources are:

1. American Community Survey (ACS) 5-year population data
2. Federal Highway Administration (FHWA) public road mileage data
3. CTD Annual Operating Report (AOR) data
4. CTD Trip and Equipment Program Invoice data

### **Measuring Inherent Demand for Transportation Disadvantaged Services**

#### **1) American Community Survey: Estimating the Transportation Disadvantaged Population in Each County**

Providing transportation services to the transportation disadvantaged population starts with measuring this population in a comprehensive and reliable way. As Trip and Equipment Grant allocations are determined on an annual basis, it is important to get an updated sense of the transportation disadvantaged population annually as well. Every year, ACS is the premier source for detailed data on population and housing characteristics for many types of geographic areas across the United States, including counties. The survey is intended to help state and local communities, as much as federal agencies, make data-driven decisions.<sup>18</sup> Every question in the survey has “a required purpose and many statistical uses.”<sup>19</sup> Data on age,<sup>20</sup> disability status,<sup>21</sup> and poverty status<sup>22</sup> all help state and local officials to plan and provide services and assistance to these populations in an efficient and effective manner.

---

<sup>18</sup> For more on how state and local government use ACS data, download “Understanding and Using American Community Survey Data: What State and Local Government Users Need to Know”. Available online at: <https://www.census.gov/programs-surveys/acs/guidance/handbooks/state-local.html>.

## Funding Allocation Study

### Fiscal Year 2020

#### Overview of the U.S. Census Bureau's American Community Survey (ACS)

The U.S. Census Bureau's American Community Survey (ACS) is the premier source of detailed population and housing data about the United States. The annual ACS randomly samples about 3.54 million households across every state, the District of Columbia, and Puerto Rico to collect data on demographic, social, housing, and economic characteristics. Unlike the Census Bureau's decennial census<sup>23</sup> that is conducted every ten years, the ACS is another legitimate survey that is done on a continuous basis "all year, every year . . . to create up-to-date statistics used by many federal, state, tribal, and local leaders."<sup>24</sup>

The U.S. Census Bureau provides the following description of the ACS on its website:<sup>25</sup>

*The American Community Survey (ACS) is an ongoing survey that provides vital information on a yearly basis about our nation and its people. Information from the survey generates data that help determine how more than \$675 billion in federal and state funds are distributed each year.*

*Through the ACS, we know more about jobs and occupations, educational attainment, veterans, whether people own or rent their homes, and other topics. Public officials, planners, and entrepreneurs use this information to assess the past and plan the future. When you respond to the ACS, you are doing your part to help your community plan for hospitals and schools, support school lunch programs, improve emergency services, build bridges, and inform businesses looking to add jobs and expand to new markets, and more.*

The U.S. Census Bureau tells ACS respondents that they are "doing your part to ensure decisions about your community can be made using the best data available."<sup>26</sup>

#### Geographic Counties

Geography is the underlying framework by which the Census Bureau collects and publishes demographic, social, housing, and economic data for the ACS. "Geography contributes to, and is involved in, ACS sampling, data collection, weighting, and data tabulation activities."<sup>27</sup> Geographic areas are classified as either "legal" or "statistical" geographic areas, and organized under the following hierarchy:

---

<sup>23</sup> While "the census is conducted once every 10 years to provide an official count of the entire U.S. population to Congress," the ACS provides more detailed data used to determine the particular social and economic needs of local communities. See commonly asked questions about "The American Community Survey and the 2020 Census" at: <<https://www.census.gov/programs-surveys/acs/about/acs-and-census.html>>.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

Like most U.S. states, Florida’s primary legal divisions are termed “counties”<sup>28</sup> and understood with the same meaning as the term is used in the Census Bureau’s geographic hierarchy.<sup>29</sup> Therefore, ACS data figures for specific Florida counties refer to the same geographic areas and political subdivisions as CTD’s Trip and Equipment Grant allocation determinations made through Rule 41-2.014, F.A.C.<sup>30</sup>

#### ACS Detailed Tables

As mentioned above, the ACS collects and presents data on demographic, social, housing, and economic characteristics. Within and across these four topics are about 50 different “subjects” for which there are over 1,400 “detailed tables.” According to the Census Bureau, “detailed tables are the most comprehensive tables” and “cover all subjects in the ACS.”<sup>31</sup> Each of these detailed tables is associated with a specific code, starting with the letter **B** or **C**, followed by two digits relating to the table subject, and then three digits “that uniquely identify the table.”<sup>32</sup> Understanding table codes helps in locating the specific type of data needed. For data to help estimate the “transportation disadvantaged” population, as it is defined in Florida Statutes,<sup>33</sup> one can start with the table subject code for “Disability Status”—18—and quickly find

<sup>28</sup> “The state shall be divided by law into political subdivisions called counties.” *Art. VIII, § 1(a), Florida Constitution*. Available online at:

<<http://www.leg.state.fl.us/Statutes/index.cfm?Mode=Constitution&Submenu=3&Tab=statutes&CFID=95860836&CFTOKEN=2b4de0ecfb8226c3-60937A99-5056-B837-1A068D65D63E787C#A8>>.

<sup>29</sup> See the definition for “County or Statistically Equivalent Entity” at the U.S. Census Bureau’s Glossary webpage at: <[https://www.census.gov/programs-surveys/geography/about/glossary.html#par\\_textimage\\_12](https://www.census.gov/programs-surveys/geography/about/glossary.html#par_textimage_12)>.

<sup>30</sup> View the rule at the Florida Department of State’s website at:

<<https://www.flrules.org/gateway/ruleNo.asp?id=41-2.014>>.

<sup>31</sup> “American Community Survey: Which Data Table or Tool Should I Use?” U.S. Census Bureau. Available online at: <<https://www.census.gov/acs/www/guidance/which-data-tool/>>.

<sup>32</sup> “Table Codes” Census Reporter. <<https://censusreporter.org/topics/table-codes/>>.

<sup>33</sup> Section 427.011(1), Florida Statutes defines “Transportation disadvantaged” to mean “those persons who because of physical or mental disability, income status, or age are unable to transport themselves or to purchase

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

a single table “AGE BY DISABILITY STATUS BY POVERTY STATUS” for which there is a condensed version (C18130) and a more detailed version (B18130). These tables break down the civilian noninstitutionalized population of a given geographic area by “age by disability status<sup>34</sup> by poverty status<sup>35</sup>.” The difference between the condensed and more detailed version is that the more detailed version breaks down the population into twice as many age groups, as demonstrated below. There are no differences between the tables with respect to either disability status or poverty status.

Age Group breakdown in B18130	Age Group breakdown in C18130
Under 5 years	Under 18 years
5 to 17 years	
18 to 34 years	18 to 64 years
35 to 64 years	
65 to 74 years	65 years and over
75 years and over	

#### ACS 1-year vs 5-year Estimates

Though they are conducted and provided on an annual basis, ACS datasets include both 1-year and 5-year estimates. Using the most recently available ACS datasets as examples, the 2018 ACS 1-year estimates use 12 months of data collected between January 1, 2018 and December 31, 2018, whereas the 2018 ACS 5-year estimates use 60 months of data collected between January 1, 2014 and December 31, 2018.<sup>36</sup> In terms of statistical robustness, 5-year estimates have serious advantages for considering their use over 1-year estimates, including larger sample size and greater reliability of accuracy, though they do rely in part on data from earlier years. Conversely, the primary benefit to using 1-year estimates is that they use more current data, albeit with larger margins of error.

---

transportation and are, therefore, dependent upon others to obtain access to health care, employment, education, shopping, social activities, or other life-sustaining activities, or children who are handicapped or high-risk or at-risk as defined in s. 411.202.”

<sup>34</sup> There are two broad categories for disability status: 1) “With a disability” and 2) “No disability”. “With a disability means having one or more of the following six: 1) “With a hearing difficulty” 2) “With a vision difficulty” 3) “With a cognitive difficulty” 4) “With an ambulatory difficulty” 5) “With a self-care difficulty” and/or 6) “With an independent living difficulty”. For more on ACS subject definition for disability status, see pages 59-62 of the “American Community Survey and Puerto Rico Community Survey 2018 Subject Definitions” at:

<[https://www2.census.gov/programs-surveys/acs/tech\\_docs/subject\\_definitions/2018\\_ACSSubjectDefinitions.pdf?#](https://www2.census.gov/programs-surveys/acs/tech_docs/subject_definitions/2018_ACSSubjectDefinitions.pdf?#)>.

<sup>35</sup> There are two broad categories for poverty status: 1) “Income in the past 12-months below poverty level” and 2) “Income in the past 12-months at or above poverty level”. For more on ACS subject definition for poverty status, see pages 107-110 of the “American Community Survey and Puerto Rico Community Survey 2018 Subject Definitions” at:

<[https://www2.census.gov/programs-surveys/acs/tech\\_docs/subject\\_definitions/2018\\_ACSSubjectDefinitions.pdf?#](https://www2.census.gov/programs-surveys/acs/tech_docs/subject_definitions/2018_ACSSubjectDefinitions.pdf?#)>.

<sup>36</sup> “When to Use 1-year, 3-year, or 5-year Estimates” U.S. Census Bureau. Available online at:

<<https://www.census.gov/programs-surveys/acs/guidance/estimates.html>>.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

Where 5-year estimates really provide value is in providing detailed data for smaller population groups and geographic areas. There are no 1-year estimates available for geographic areas with total populations of less than 65,000, while 5-year estimates are available for all areas. So, while 2018 ACS 5-year estimates are available for all counties in Florida, 2018 ACS 1-year estimates are not available for 26 of Florida's 67 counties, or nearly 40 percent. Further, between the more condensed table C18130 and the more detailed B18130, only C18130 is available in 5-year estimates, necessitating its use if allocations are to be determined at the county level. As section 3 of the Census Bureau's *General Data Users Handbook* states: "For data users interested in obtaining detailed ACS data for small geographic areas (areas with fewer than 65,000 residents), ACS 5-year estimates are the only option."<sup>37</sup>

## 2) Public Road Mileage: Estimating Overall Demand for Transportation in Each County

In planning and providing coordinated transportation services to the TD population, it helps to analogize by having a sense of the overall demand for transportation services among the general population, which can be informed through understanding the makeup of transportation infrastructure in a local area. The Federal Highway Administration (FHWA) at the U.S. Department of Transportation is the federal body "responsible for assuring that adequate highway transportation data and systems performance information is available to support its functions and responsibilities, as well as those of the Administration and United States Congress."<sup>38</sup> The FHWA collects public road mileage data from state agencies such as Florida's Department of Transportation on all roads open to public travel, including federal, state, county, city, and privately owned roads like toll facilities. All data is required to be certified by the States' Governors by no later than June 1 of each year.

### Overview of Federal, State, and Local Data on Public Road Mileage and Travel

Estimating the overall demand for transportation services in a county starts with the total miles of public roads in the county and then estimating total traffic on these roads. The Florida Department of Transportation's (FDOT) Transportation and Data Analytics Office produces annual reports on public road mileage and travel. These reports show Centerline Miles (CLM) and Daily Vehicle Miles Traveled (DVMT), with subtotals by county, urban size, and functional classification. Below are select definitions taken from the glossary section of the Transportation Data and Analytics Office's Reports of Highway Mileage and Travel (DVMT) webpage:<sup>39</sup>

**Centerline Miles (CLM)** - The length of a road, in miles.

**County Road System** - Roads under the jurisdiction of one of the 67 counties of Florida. It does not include roads maintained by a county for a city under a maintenance agreement.

**Daily Vehicle Miles Traveled (DVMT)** - A measure of the total traffic on a road. It is the product of the average daily traffic count and the length of the road.

---

<sup>37</sup> *General Data Users Handbook*, U.S. Census Bureau. Section 3. Page 15. Available online at: [https://www.census.gov/content/dam/Census/library/publications/2018/acs/acs\\_general\\_handbook\\_2018\\_ch03.pdf](https://www.census.gov/content/dam/Census/library/publications/2018/acs/acs_general_handbook_2018_ch03.pdf).

<sup>38</sup> "Highway Performance Monitoring System: Field Manual" Federal Highway Administration, U.S. Department of Transportation. December 2016. p. 1-1. Available online at: [https://www.fhwa.dot.gov/policyinformation/hpms/fieldmanual/hpms\\_field\\_manual\\_dec2016.pdf](https://www.fhwa.dot.gov/policyinformation/hpms/fieldmanual/hpms_field_manual_dec2016.pdf).

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**Functional Classification** - A description of how a road functions, using definitions and processes specified by the Federal Highway Administration. A road may be classified as a principal arterial (including Interstates, Other Freeways and Expressways, or others), a minor arterial, a collector (major or minor), or a local road. Principal arterials have a mobility function: they provide for movement from one general area to another. Local roads have an access function: they provide direct access to homes, businesses, and other destinations. The other classifications have both mobility and access functions, with minor arterials providing more mobility, and collectors providing more access.

**Lane Miles** - The product of centerline miles and number of lanes. A four-lane road, two miles long has eight lane miles.

**Public Roads** - All roads under the State Highway System, the County Road System, and the City Road System, plus public roads administered by various branches of the U.S. government. Does not include private subdivision roads or roads within shopping centers or other large private areas.

**State Highway System** - Roads under the jurisdiction of the State of Florida, and maintained by the Florida Department of Transportation or a regional transportation commission; includes roads with Interstate, US, and SR numbers.

Data used in these reports are sent to the U.S. Department of Transportation's Federal Highway Administration (FHWA) each year and used to determine federal highway funding allocations. Local governments in Florida submit data to FDOT on county and city public roads as part of this process, which is required by Section 218.322, Florida Statutes. The FHWA categorizes population areas (or urban size) by rural (populations of less than 5,000), small urban (populations of 5,000 to 49,999), small urbanized (populations of 50,000 to 200,000), and large urbanized (populations of more than 200,000). Population areas and data used in these determinations come from the U.S. Census Bureau.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

Relationship Between Total Population, Square Miles, CLM, and DVMT

Daily Vehicle Miles Traveled (DVMT) is the measure of total traffic on a road—as a product of the average daily traffic count and the length of the road. Therefore, it is expected that a county’s total DVMT would be highly predicted by its total Centerline Miles (CLM), or the total length of all of its roads. The gray scatter plot below of Florida’s 67 counties confirms a strong linear relationship between total miles of public roads and total volume of traffic, with CLM being a high predictor of DVMT at an  $R^2$  of 0.8588.<sup>40</sup>

<sup>40</sup> The  $R^2$  measure is a commonly used statistical measure of how well a predictive model (made up of independent variables) approximates real data points for a dependent variable. Put simply, it measures the strength of the relationship, or predictive power, between independent variables and a dependent variable.

Funding Allocation Study  
Fiscal Year 2020

Total population of a county would be expected to be highly correlated with a county's daily traffic count as well, and therefore also highly predictive of its DVMT. The blue scatter plot below of Florida's 67 counties confirms an even stronger relationship of this variable to total volume of traffic, with its predictive power of DVMT achieving an  $R^2$  of 0.9591.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

The current allocation methodology does not consider CLM but instead considers a county's square miles. The orange scatter plot below shows the relationship between this variable and a county's DVMT. While there is some predictive power of square miles to DVMT with an  $R^2$  of 0.2739, this is considerably weaker compared to both the total populations and CLM variables.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

As stand-alone individual variables, both CLM and total population are powerful predictors of a county's DVMT. To test whether the interaction of these two variables enhances their predictive power, they are multiplied with each other (Total Population \* CLM) in the green scatter plot below. With an  $R^2$  of 0.9756, the predictive power of these two variables interacting with one another is greater, though the relationship is one of a diminishing, or plateauing, effect rather than a linear effect.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

As a stand-alone independent variable, county square miles has a considerably weaker relationship to DVMT compared to each of the independent variables of county total population and CLM. To test whether the interaction of all three independent variables enhances predictive power compared to just the interaction of total population and CLM alone, square miles is multiplied with total population and CLM (Total Population \* CLM \* Square Miles) in the gold scatter plot below. With an  $R^2$  of 0.9478, the predictive power is diminished by interacting square miles with total population and CLM, compared to just interacting total population with CLM.

### Measuring Performance, or the Provision of Transportation Disadvantaged Services

#### **3) CTD's Annual Operating Reports: Measuring Transportation Services Provided Across the TD System**

##### Overview of Annual Operating Reports

Pursuant to Chapter 427, Florida Statutes, each CTC submits an Annual Operating Report (AOR) to CTD that “provides an overview of the program and a summary of performance trends statewide.”<sup>41</sup> In essence, AORs are intended to “accurately reflect each CTC’s operating data, provide a statewide operational profile of the Florida Coordinated Transportation System, and evaluate certain performance aspects of the

<sup>41</sup> “Annual Operating & Performance Reporting” Florida Commission for Transportation Disadvantaged. Available online at: <<https://ctd.fdot.gov/annualreporting.htm>>.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

coordinated systems individually and as a whole.”<sup>42</sup> The AOR data is compiled within the CTD Annual Performance Report, which is published at the beginning of every calendar year.

Qualitative data collected in the AOR include general information about each CTC, network type, operating environment (rural or urban), whether a CTC provides out-of-county trips (Yes or No), and listings of any transportation operators and/or coordination contractors.<sup>43</sup> For quantitative data, the AOR contains specific counts by trip service type,<sup>44</sup> revenue source,<sup>45</sup> passenger type,<sup>46</sup> trip purpose,<sup>47</sup> unduplicated passenger head count (UDPHC),<sup>48</sup> number of unmet trip requests, number of no-shows, number of complaints, and number of commendations. Finally, in addition to other quantitative data on road calls, accidents, vehicle inventory, and number of drivers, AOR data also contains financial data for CTCs on revenue totals from each purchasing agency and expense sources (labor, benefits, services, supplies, taxes, etc.).

---

<sup>42</sup> “Instructions for the Completion of the Annual Operating Report (AOR): FY 2018-19” Florida Commission for Transportation Disadvantaged. p. 3 Available online at:

<<https://ctd.fdot.gov/docs/AORAPRDocs/CTCAORReportingInstructions20190429.pdf>>.

<sup>43</sup> Coordination contractors are agencies that have a written contract with the CTC to perform some, if not all of, its own transportation services to a segment within the TD population (e.g., an ARC serving individuals with developmental disabilities, etc). The contractor provides data on its services (trips and miles) to the CTC, which is compiled within the AOR.

<sup>44</sup> Trip service types in the AOR include: Fixed Route/Fixed Schedule, Deviated Fixed Route, Complementary ADA Service, Paratransit, Ambulatory, Non-Ambulatory, Stretcher Service, Transportation Network Companies (TNC), Taxi, School Board (School Bus), and Volunteers. See: “Instructions for the Completion of the Annual Operating Report (AOR): FY 2018-19” Florida Commission for Transportation Disadvantaged. pp. 10-11 Available online at: <<https://ctd.fdot.gov/docs/AORAPRDocs/CTCAORReportingInstructions20190429.pdf>>.

<sup>45</sup> “Revenue source” means the funding source that purchased a trip. Within the context of AOR definitions, it is synonymous with “purchasing agency.” Revenue sources/purchasing agencies in the AOR include: Agency for Health Care Administration (AHCA), Agency for Persons with Disabilities (APD), Commission for the Transportation Disadvantaged (CTD), Department of Children and Families (DCF), Department of Economic Opportunity (DEO), Department of Education (DOE), Department of Elder Affairs (DOEA), Department of Health (DOH), Department of Juvenile Justice (DJJ), Department of Transportation (DOT), Local Government, Local Non-Government, and other Federal or State Programs. See: “Instructions for the Completion of the Annual Operating Report (AOR): FY 2018-19” Florida Commission for Transportation Disadvantaged. p. 11-12 Available online at: <<https://ctd.fdot.gov/docs/AORAPRDocs/CTCAORReportingInstructions20190429.pdf>>.

<sup>46</sup> “Passenger type” includes those populations identified in the definition for “transportation disadvantaged” in section 427.011(1), Florida Statutes (Older Adults, Children at Risk, Persons with Disabilities, and Low Income) or “Other.” See: “Instructions for the Completion of the Annual Operating Report (AOR): FY 2018-19” Florida Commission for Transportation Disadvantaged. p. 13 Available online at: <<https://ctd.fdot.gov/docs/AORAPRDocs/CTCAORReportingInstructions20190429.pdf>>.

<sup>47</sup> Trip purposes include: Medical, Employment, Educational/Training/Day Care, Nutritional, and Life Sustaining/Other. See: “Instructions for the Completion of the Annual Operating Report (AOR): FY 2018-19” Florida Commission for Transportation Disadvantaged. p. 13 Available online at: <<https://ctd.fdot.gov/docs/AORAPRDocs/CTCAORReportingInstructions20190429.pdf>>.

<sup>48</sup> UDPHC is the “actual number of individual persons who took a trip during the reporting period, regardless of how many trips the person took.” See: “Instructions for the Completion of the Annual Operating Report (AOR): FY 2018-19” Florida Commission for Transportation Disadvantaged. p. 13 Available online at: <<https://ctd.fdot.gov/docs/AORAPRDocs/CTCAORReportingInstructions20190429.pdf>>.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

As the AOR data collected by CTD is a compilation of data derived from the submission of each individual CTC, there is inherent risk of inconsistencies in the way the data is gathered and reported from some 60 different sources. This risk of inconsistency is increased when the CTC includes trip and mileage information from coordination contractors, where the CTC may not have oversight or verify the data submitted by these organizations. The site visits conducted bi-annually to gauge CTC compliance with the CTD Trip and Equipment Grant agreements and to determine the accuracy and availability of information used to prepare the AOR indicate widespread variation in the processes used to prepare the AOR and the documentation maintained to support AOR data.

#### **4) Trip and Equipment Program Invoices: Measuring Transportation Services Provided Within the Trip and Equipment Grant Program**

##### Overview of Invoices to CTD for the Provision of Transportation

As described above, the AOR is a comprehensive report that includes system-wide total figures for not only trips funded through CTD's Trip and Equipment Grant program but also trips reimbursed by other programs and agencies such as Medicaid, the Department of Children and Families, the Department of Elder Affairs, etc. At a more granular level, analysis of invoices submitted by each CTC to CTD under Trip and Equipment Grant agreements allow for a more detailed look at the provision of non-sponsored transportation services which are actually reimbursed using Transportation Disadvantaged Trust Fund (TDTF) dollars—the same dollars allocated through the Trip and Equipment Grant methodology that is the subject of this report.

CTCs are required to submit monthly invoices to CTD in order to be reimbursed with Trip and Equipment Grant Allocation funds for services provided to eligible TDTF riders. At the same time, these same funds are expressly prohibited from being used “to supplant or replace funding of transportation disadvantaged services which are currently funded to a grantee by any federal, state, or local governmental agency.”<sup>49</sup>

Monthly invoices submitted by the CTCs to CTD are done using standardized forms and formats prescribed by the Commission in order to ensure consistency. The summary level statistics captured in these forms include basic information such as the CTC's name and the county (or counties) served, and also number of trips *and* total miles driven for each of the following: ambulatory trips, wheelchair trips, stretcher trips,

Available online at: <https://ctd.fdot.gov/docs/GrantDocs/CTDInvoicingProceduresforTranspCapEquip070117.pdf>. Also see: “TD Trust Fund Eligibility Criteria” adopted May 22, 1997. “A customer would not be considered eligible for TDTF when another purchasing agency is responsible for such transportation.” Available online at: <https://ctd.fdot.gov/docs/AboutUsDocs/TDTrustFundEligibilityCriteriaAdoptedMay1997andFS427.pdf>.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

group per passenger<sup>50</sup> trips, group per group trips.<sup>51</sup> Total figures for any number of bus passes are also included for daily passes, weekly passes, and monthly passes.

To receive reimbursement, however, a CTC must provide more supporting documentation . . .

*“. . . which identifies specific trips designated as eligible for the Transportation Disadvantaged Trust Fund. The Grantee shall provide sufficient documentation for each cost or claim for reimbursement to allow an audit trail to ensure that the services rendered or costs incurred were for those that were provided. The documentation must be sufficiently detailed to comply with the laws and policies of the Florida Department of Financial Services.”<sup>52</sup>*

To satisfy these supporting documentation requirements for paratransit trips, a CTC must provide the following for each paratransit trip (ambulatory, wheelchair, stretcher, group per passenger, group per group):<sup>53</sup>

• <b>DATE OF SERVICE.</b>	Month/Date/Year (00/00/00).
• <b>CUSTOMER NAME.</b>	Last name, first name.
• <b>COST.</b>	The rate for the given mode of service.
• <b>MODE.</b>	Ambulatory, wheelchair, stretcher, etc.
• <b>PICK UP TIME.</b>	Hour:minutes AM/PM format (00:00 AM).
• <b>ORIGIN ADDRESS.</b>	Trip origin’s physical address (street number and name).
• <b>ORIGIN CITY.</b>	
• <b>DROP OFF TIME.</b>	Hour:minutes AM/PM format (00:00 AM).
• <b>DESTINATION ADDRESS.</b>	Trip destination’s physical address (street number and name).
• <b>DESTINATION CITY.</b>	
• <b>MILES.</b>	Total number of miles for the trip.

<sup>50</sup> CTD defines a “Group per Passenger” trip as “three or more (as defined locally) eligible Transportation Disadvantaged customers on one vehicle being picked up at multiple origins and traveling to one single destination or being picked up from one single origin and traveling to multiple destinations.” *COMMISSION FOR THE TRANSPORTATION DISADVANTAGED INVOICING PROCEDURES FOR THE PROVISION OF TRANSPORTATION AND CAPITAL EQUIPMENT*. July 1, 2017. p. 9. Available online at:

<<https://ctd.fdot.gov/docs/GrantDocs/CTDInvoicingProceduresforTranspCapEquip070117.pdf>>.

<sup>51</sup> CTD defines a “Group per Group” trip as “three or more (as defined locally) eligible Transportation Disadvantaged customers on one vehicle being picked from a single origin and traveling to one single destination.” *COMMISSION FOR THE TRANSPORTATION DISADVANTAGED INVOICING PROCEDURES FOR THE PROVISION OF TRANSPORTATION AND CAPITAL EQUIPMENT*. Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## ANALYSIS OF INDIVIDUAL VARIABLES

Each of the datasets discussed in the previous section are analogous in some way to the existing variables used in the current Trip and Equipment Grant program allocation formula. The program's current formula balances measures of inherent demand (total population and square miles) with measures of CTCs' performance in provided transportation services to the TD population (AOR trips and AOR miles). Analysis of like variables can provide insight into how the use of different datasets impacts adherence to the guiding principles identified in this report. This section examines how each variable could adhere more to each guiding principle using more precise measures from the datasets described in the previous section. The use of datasets with more precise measures of the Trip and Equipment Grant program's client population, transportation infrastructure, and services provided with Trip and Equipment Grant funds (i.e., non-sponsored trips), allows for greater cost-effective allocation of TDTF dollars with respect to CTD's mission.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**Measuring Demand for Transportation Disadvantaged Services**

**Estimating the Transportation Disadvantaged Population in Each County**

Measuring the TD population is one of the simplest and most straightforward ways of estimating the demand for TD services. While the current methodology looks at the *total* population by county (that is, both TD and non-TD populations), it is possible to still use a single table (C18130) from the exact same data source—the 5-year American Community Survey—as is currently being used for the total population, but that isolates the TD population so that dollars are more directly allocated according to this population that comprises the T&E Grant program’s ultimate stakeholders.

**Analysis of Adherence to Guiding Principles**

**ACCESS:** Allocating TDTF dollars according to the TD population significantly enhances the per input allocation (i.e., maximizes every dollar allocated) for the very individuals these funds are intended to serve. This per input allocation enhancement is further analyzed in the quantitative analysis below.

**INNOVATION:** Overall population figures—whether they be total or TD population—are non-prescriptive measures of inherent demand. By contrast, performance measures that consider specific types of services provided are more prescriptive by nature. The mere presence, and ultimately greater weight, of a non-prescriptive measure like population arguably allows more room for innovation since it makes a CTC’s allocation amount less dependent on providing the same levels and types of services as seen in past years. Finally, the need for innovation in the TD system plausibly increases along with increases to the TD population, but not so much the total population.

**COORDINATION:** N/A

**ACCOUNTABILITY:** The TD program is a state program whose eligibility is defined with a level of specificity in Florida Statutes. The TD program exists not for the total population but the TD population. Tailoring allocations more precisely to this subset of the population helps it to function more faithfully to the purposes set forth by state lawmakers.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**TRANSPARENCY:** Data on the total population from the ACS 5-year dataset has the important benefit of being well known and well respected. While table C18130 “AGE BY DISABILITY STATUS BY POVERTY STATUS” may not be as immediately as familiar to the general population and even some policymakers, it is from the exact same data source and every bit as readily available and understandable. Therefore, using the TD population rather than the total population from this same data source enhances adherence to the guiding principles as described above without sacrificing transparency. By giving an improved picture (or estimate) of the potential clientele in each county, using table C18130 could even be said to improve transparency.

Quantitative Analysis of Population Variables

In the earlier section of this report, “CURRENT ALLOCATION METHDOLOGY”, it was demonstrated that the current methodology effectively valued each person—TD and non-TD alike—statewide and within each county the same at \$0.37 per person. Below are two sets of tables—TOTAL POPULATION (**TABLE 1A**) and TD ONLY POPULATION (**TABLE 1B**)—to demonstrate how much more an allocation formula factoring just the TD population values this population compared to an allocation formula that counts the whole population. Using an effective allocation of \$7,511,87.98 for population—as is done in the current year allocation methodology—a value per TD population individual comes out to \$0.37 per individual when factoring the total population vs \$0.99 per individual when factoring only the TD population.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**Estimating Overall Demand for Transportation in Each County**

Population alone is limited in measuring inherent demand for transportation services. Florida’s 67 counties comprise the third largest state that is as diverse as any in the U.S. The level of transportation demanded by the broader population in each county varies. There is also considerable diversity within counties, many of which have differing combinations and proportionalities of rural, small urban, and large urban geographic areas and populations. The current allocation methodology attempts to adjust for this reality by including the “total area in square miles” variable. A county with more square miles overall, however, may have fewer miles of public roads or less overall volume of traffic on its roads compared to another county.

Analysis of Adherence to Guiding Principles

**ACCESS:** Allocating TDTF dollars according to centerline miles (CLM) establishes a per input allocation for land where the provision of TD services actually happens. Access is ultimately provided to TD clients through the medium of public roads, not land in general. Much more than county square miles, longer miles of roads correlate with longer trips, which require more funds.

**INNOVATION:** Miles of public roads, or CLM, is similar to population in that it is a non-prescriptive measure. Like population, use of CLM as a measure in the allocation formula makes a CTC’s allocation amount less dependent on providing the same levels and types of services as seen in past years. Opportunities for innovation also come with changes to local transportation infrastructures. While square miles never materially change, public road networks across Florida are always changing, but in different ways in different counties. Allocating TDTF dollars by CLM each year is a way to ensure funding is responding to changes at local levels in transportation infrastructure.

**COORDINATION:** N/A

**ACCOUNTABILITY:** N/A

**TRANSPARENCY:** Like the American Community Survey (ACS), the data on public roads collected by the Federal Highway Administration (FHWA) is performed by a federal agency in a consistent manner across the U.S. going back decades. Also like the ACS, the data offers the opportunity to be broken down into more detailed categories that can be given additional weight, such as functional classifications and population areas. The data is also annually certified by States’ Governors. Finally, by offering measures for variables such as CLM that are far superior in predicting DVMT, the data provides a tool for better insight into the differences in transportation demanded in different parts of the state.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

Quantitative Analysis of the Square Miles and Public Roads Variables

While total miles of public roads and even the level of traffic volume on the roads correlate somewhat with a county's total square miles, there remains significant enough variation to warrant consideration of the use of one measure versus the other. In the earlier section of this report, "CURRENT ALLOCATION METHODOLOGY", it was demonstrated that the current methodology effectively values each square mile—statewide and within each county—the same at \$138.71 per square mile. As miles of public roads are not a subset of a county square miles, it is not possible to show how the current allocation methodology effectively values this factor—because it does not. It is possible, however, to show how much each centerline mile (CLM) would effectively be valued if current allocation levels were taken for each county and divided by this number.

Below is a table (**TABLE 2**) showing the per mile of public roads amounts with current allocations determined by county square miles vs what the allocations would be if distributed according to a county's share of statewide centerline miles. Taking the effective allocations for square miles for each county which total \$7,511,873.98 in the current year allocation methodology, if these same amounts were divided by counties' respective totals for centerline miles, they would range from a maximum in Glades County at \$274.09 per mile to a minimum in Pinellas County at \$10.58 per mile. This level of variation is particularly noteworthy given that CLM is a much stronger predictor of DVMT compared to square miles.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**TABLE 2: TRIP & EQUIPMENT GRANT ANALYSIS OF SQUARE MILES AND MILES OF PUBLIC ROADS**

COUNTY	ANALYSIS OF SQUARE MILES			ANALYSIS OF CENTERLINE MILES (CLM)			TOTAL ALLOCATIONS PER CENTERLINE MILE (CLM)

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**Measuring Performance, or the Provision of Transportation Disadvantaged Services**

**Measuring TDTF-Reimbursable Transportation Services Provided Through Trip and Equipment Grants**

While the ACS 5-year population and FHWA public roads mileage datasets offer reliable insights in comparing the respective populations and transportation infrastructures in each county, they offer virtually no insight on the actual services being provided anywhere in the Coordinated Transportation Disadvantaged System. An allocation methodology that does not consider the actual performance of providing transportation services to the TD population raises especially serious concerns with respect to the guiding principle of Accountability.

Both datasets that contain information on CTCs’ performance—AORs and Invoices—are collected and organized directly by CTD. The AORs contain higher level data on trips provided to the TD population across all funding sources, while Trip and Equipment Grant program invoices contain more detailed data on trips provided to this same population that are only reimbursed using TDTF dollars. Thus, trips reflected in the Invoice data are a subset of trips reflected in the AOR data. The current allocation methodology’s formula uses AOR data on sponsored and non-sponsored trips (and miles) to allocate TDTF dollars, in part, according to where TD services overall appear to be most needed. Replacing the use of this AOR data with Trip and Equipment Grant invoice data would result in the methodology’s formula allocating TDTF dollars according to where just non-sponsored trips (the only trips reimbursable through the Trip and Equipment Grant) appear to be most needed.

**Analysis of Adherence to Guiding Principles**

**ACCESS:** Allocating TDTF dollars by CTD trips enhances the per input allocation for each trip actually reimbursed through the Trip and Equipment Grant program. This per input allocation enhancement is further analyzed in the quantitative analysis below. Maximizing dollars for non-sponsored trips maximizes access since access for sponsored trips is guaranteed through other funding sources. Using Invoice data—and not AOR data—to measure CTD trips provided equates with using harder, more verifiable evidence that access is being provided.

**INNOVATION:** Compared to data on population and miles of public roads, invoice data is more prescriptive in that it reflects particular types of services that had to qualify on a predetermined basis in order to receive reimbursement. In general, any type of performance data will be more prescriptive compared to non-performance data. Performance data can always allow for more innovation by allowing for more types of services to be counted, though it can be expected to always be lagging.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

What performance data lacks for in innovation, however, it tends to make up for in accountability since it demonstrates evidence of services provided.

**COORDINATION:** Money that is allocated from the TDTF in the Trip and Equipment Grant program is money purposed for the reimbursement of non-sponsored trips for which there is no other funding available. The definition of “coordination” in Chapter 427 as the “arrangement for the provision of transportation services to the transportation disadvantaged in a manner that is cost-effective, efficient, and reduces fragmentation and duplication of services”<sup>55</sup> necessitates reserving these dollars in this manner for trips with no other means of available funding. To reimburse for trips for which other funding is available would duplicate services and prove neither efficient nor cost-effective. Just as TDTF dollars are only used to reimburse for non-sponsored trips, they should only be allocated according to non-sponsored trips and not factor sponsored trips that are reimbursed from other funding sources.

**ACCOUNTABILITY:** The data contained in the invoices is the ultimate dataset on performance in the Trip and Equipment Grant program. The Trip and Equipment Grant program is a state program put in place and funded with state taxpayer dollars to provide transportation services where no alternative means or funding is available. Invoice data is evidence of providing access with these types of trips, and reflects trips that had to meet a higher threshold of verifiability in order to be reimbursed, and therefore recorded, by CTD. Without the provision of non-sponsored trips, the allocations in the Trip and Equipment Grant program ultimately serve no purpose.

**TRANSPARENCY:** Using Trip and Equipment Grant program invoice data to gauge performance—rather than AOR data—represents a shift to determining allocations based on a dataset that is more consistent, verifiable, and provides a greater level of detail on the services that are ultimately, actually reimbursed using the dollars from the allocations.

#### Quantitative Analysis of Performance Variables – CTD Only Trips vs All Trips

A simple demonstration illustrates the improvement in efficiency and cost-effectiveness by allocating specifically for the performance of providing non-sponsored trips. In the earlier section of this report, “CURRENT ALLOCATION METHODOLOGY”, it was demonstrated that the current methodology effectively valued each trip in the annual operating report—CTD and non-CTD alike—statewide and within each county the same at \$0.33 per trip (**TABLE 3A**). With the same effective allocation of \$7,511,873.98 for trips, had the allocation formula factored only CTD trips (**TABLE 3B**), then the value placed on each CTD trip would have increased from \$0.33 per trip to \$0.70 per trip. In other words, allocating \$0.70 for each trip the program intends to reimburse for is more cost-effective compared to allocating \$0.33 for each trip the programs intends to reimburse for.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## BUILDING A MODEL (OR MODELS)

### **Overview of Similarities of Current Methodology to Models Presented**

The current allocation methodology consists of two core components: 1) Base Funding and 2) Formula Funding. The methodology begins with the Base Funding amount before applying the Funding Formula. Within the Formula Funding component, 50% weight is given to measures of inherent demand for TD services (25% total population and 25% square miles), balanced with the remaining 50% weight given to measures of CTCs' performance in providing TD services (25% AOR trips and 25% AOR miles).

This section presents three different alternative models for allocation methodologies to help with understanding how weighted totals are calculated within each variable, and how each variable contributes to a final allocation amount determined for each county. The three models presented are analyzed backwards from the way the current allocation methodology works. That is, the Formula Funding component is analyzed alone first before being combined with the other stabilizing component which attempts to honor the intent behind the Base Funding "to maintain system and service stability."<sup>56</sup> Working backwards from the Funding Formula to the stabilizing component allows for the Funding Formula's impacts to first be assessed before determining the optimal extent to which year-over-year stability needs to be given weight in the methodology.

### **Formula Funding**

#### **Variables**

The Funding Formulas analyzed here remain consistent with the fundamental approach of the Current Allocation Methodology's formula in that they balance measures of inherent demand for TD services with measures of CTCs' performance. The datasets used to measure inherent demand are the ACS 5-year and the FHWA information on public roads. The specific measures of inherent demand are the TD population (**TABLE 4A**) and centerline miles (**TABLE 4B**). The dataset used to measure program performance consists of the invoices for provided services that CTCs submit to CTD in exchange for reimbursement in the Trip and Equipment Grant program. The specific measures of performance are the trips (and their corresponding miles) and bus passes CTCs provide for non-sponsored transportation (**TABLE 4C**).

Within each of the three datasets are characteristics which can have their respective weights adjusted relative to one another. The weight-adjustable characteristics within each are as follows:

#### *1) ACS 5-Year (TD Population)*

- *Under 18 Years, No Disability, Below Poverty*
- *Under 18 Years, No Disability, At or Above Poverty*
- *Under 18 Years, With a Disability, Below Poverty*
- *Under 18 Years, With a Disability, At or Above Poverty*
- *18 to 64 Years, No Disability, Below Poverty*
- *18 to 64 Years, No Disability, At or Above Poverty*

---

<sup>56</sup> Rule Chapter 41-2.014(5)(a), Florida Administrative Code (F.A.C.). The rule can be accessed on the Florida Department of State website at: <https://www.flrules.org/gateway/ruleNo.asp?id=41%E2%80%90902.014>.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

- 18 to 64 Years, With a Disability, Below Poverty
- 18 to 64 Years, With a Disability, At or Above Poverty
- 65 Years and Over, No Disability, Below Poverty
- 65 Years and Over, No Disability, At or Above Poverty
- 65 Years and Over, With a Disability, Below Poverty
- 65 Years and Over, With a Disability, At or Above Poverty

In the models presented in this section, all characteristics for the TD population are weighted at 1.0 so that every individual falling under this population is counted equally. Individuals from the dataset who either fall under “Under 18 Years, No Disability, At or Above Poverty” or fall under “18 to 64 Years, No Disability, At or Above Poverty” are not considered to be part of the TD population and therefore are weighted at 0.0.

*Example Calculation:*

2) *CENTERLINE MILES (CLM)*

- *Rural — Populations of less than 5,000*
- *Small Urban — Populations of 5,000 to 49,999*
- *Small Urbanized — Populations of 50,000 to 200,000*
- *Large Urbanized — Populations of more than 200,000*

All categories of centerline miles (CLM)—Rural, Small Urban, Small Urbanized, and Large Urbanized—are weighted at 1.0 so that every mile of public roads is counted equally across the state.

*Example Calculation:*

EXAMPLE FOR TABLE 4B: MODELS FOR CONSIDERATION - PUBLIC ROADS (WEIGHTING)					
COUNTY	CENTERLINE MILES (CLM)				WEIGHTED PUBLIC ROADS
	FHWA				
	2018

### 3) TRIP AND EQUIPMENT GRANT INVOICES

- *Trips*
  - *Ambulatory*
  - *Wheelchair*
  - *Stretcher*
  - *Group Per Passenger*
  - *Group Per Group*
- *Miles*
  - *Ambulatory*
  - *Wheelchair*
  - *Stretcher*
  - *Group Per Passenger*
  - *Group Per Group*
- *Bus Passes*
  - *Monthly*
  - *10-Day*
  - *Weekly*
  - *Daily*
  - *Single Trip*

The different types of trips and bus passes are weighted at an amount relative to the unit cost (or rate) in the Trip and Equipment Grant program at which they are reimbursed relative to an ambulatory trip.<sup>57</sup> For example, wheelchair trips in the program are reimbursed at 1.7 times the rate at which ambulatory trips are reimbursed at, so a wheelchair trip is counted at the equivalent of 1.7 ambulatory trips in the models presented in this section. Also, miles are weighted at 0.1 the amount for an equivalent type of trip, so that each additional mile in a trip adds 0.1 to the total for the trip. For additional detail on weighting behind Trip and Equipment Program service type, see **Appendix A** of this report.

*Example Calculation:*

EXAMPLE FOR TABLE 4C: MODELS FOR CONSIDERATION - TRIP AND EQUIPMENT GRANT INVOICES (WEIGHTING)															
COUNTY	TRIP & EQUIPMENT GRANT INVOICE DATA														
	2018-2019														
	Trips					MILES					BUS PASSES				
	Ambulatory	Wheelchair	Stretcher	Group	Group Group	Ambulatory	Wheelchair	Stretcher	Group	Group Group	Monthly	10-Day	Weekly	Daily	Single Trip
WEIGHT	1.0	1.7	3.6	0.5	1.6	0.10	0.17	0.36	0.05	0.16	10.0	3.0	1.0	0.5	0.3
Example County	10	10	10	10	10	100	100	100	100	100	10	10	10	10	10
															316.000

*Ambulatory Trips:*  $(10 * 1.0) = 10 +$   
*Wheelchair Trips:*  $(10 * 1.7) = 17 +$   
*Stretcher Trips:*  $(10 * 3.6) = 36 +$   
*Group per Passenger Trips:*  $(10 * 0.5) = 5 +$   
*Group per Group Trips:*  $(10 * 1.6) = 16 +$   
*Ambulatory Miles:*  $(100 * 0.1) = 10 +$   
*Wheelchair Miles:*  $(100 * 0.17) = 17 +$   
*Stretcher Miles:*  $(100 * 0.36) = 36 +$   
*Group per Passenger Miles:*  $(100 * 0.05) = 5 +$   
*Group per Group Miles:*  $(100 * 1.6) = 16 +$   
*Monthly Bus Passes:*  $(10 * 10.0) = 100 +$   
*10-Day Bus Passes:*  $(10 * 3.0) = 30 +$

<sup>57</sup> Rates for different types of trips/miles (ambulatory, wheelchair, group per passenger, and group per group) are “based on average number of minutes wait/load time for picking up and dropping off the different types of clients.” See: *2019 Rate Model Report: Florida Commission for the Transportation Disadvantaged*. Thomas Howell Ferguson P.A. June 27, 2019. pp. 17-18, 30, and 40-41. Available online at: <https://helgonio.github.io/ctdallocationstudy/THF-CPA%202019%20Rate%20Model%20Report%20CTD.pdf>.

## Funding Allocation Study

### Fiscal Year 2020

#### Statewide Shares

Once the weighted totals for each variable are tallied, a statewide share for each county by variable can be calculated. Taking Alachua County as an example, its statewide share of each variable is as follows:

<b><i>SHARE OF TD POPULATION:</i></b>	<b><i><math>(96,121 \div 7,589,002) = 1.27\%</math></i></b>
<b><i>SHARE OF CENTERLINE MILES:</i></b>	<b><i><math>(1,820.154 \div 123,099.224) = 1.48\%</math></i></b>
<b><i>SHARE OF INVOICED TRIPS:</i></b>	<b><i><math>(44,483.050 \div 5,643,204.900) = 0.79\%</math></i></b>

Any formula that gives greater weight to a variable that represents a higher statewide share for a county will ultimately result in more funds being allocated toward that same county. With the example above, a formula that gives more weight to the variable for centerline miles will result in a higher allocation amount for Alachua County than will a formula that gives more weight to invoiced trips, since 1.48% is greater than 0.79%.

#### Allocation Factors

With statewide shares calculated for each county and weights assigned to each variable, it then becomes possible to calculate each county's share of the total amount appropriated for the Trip and Equipment Grant program, which is referred to here as an "allocation factor". Taking, again, Alachua County as an example, its allocation factor in a model weighted 25% based on TD population, 25% based on centerline miles, and 50% based on invoiced trips would be as follows:

<b><i>SHARE OF TD POPULATION:</i></b>	<b><i><math>(1.27\% * 25\%)</math></i></b>
<b><i>SHARE OF CENTERLINE MILES:</i></b>	<b><i><math>+ (1.48\% * 25\%)</math></i></b>
<b><i>SHARE OF INVOICED TRIPS:</i></b>	<b><i><math>+ (0.79\% * 50\%)</math></i></b>
<b><i>ALLOCATION FACTOR:</i></b>	<b><i><math>= 1.08\%</math></i></b>

In this example, whatever the total appropriated amount available for the formula funding is, Alachua County's share of that total would be 1.08%

The tables below provide county-by-county figures for weighted totals and statewide shares by variable (TABLE 5A), allocation factors (TABLE 5B), and final allocations (TABLE 5C), which total \$56,716,435.23 for each of three hypothetical models:

- **MODEL 1:** 50% Inherent Demand (25% TD Population, 25% CLM) and 50% Performance (Trips)
- **MODEL 2:** 25% Inherent Demand (12.5% TD Population, 12.5% CLM) and 75% Performance (Trips)
- **MODEL 3:** 75% Inherent Demand (37.5% TD Population, 37.5% CLM) and 25% Performance (Trips)

Model 1 may be thought of as the status quo approach in that it keeps the same 50-50% weighting balance between inherent demand and performance—just using different datasets from what is currently used. Model 2 may be thought of as an approach where prior performance is given stronger consideration in the allocation of funds. However, in Model 2, counties with more unmet demand would still receive a bit more per trip provided since the amount allocated to a county often can determine the overall level of services it is able to offer. Model 3 is a reverse approach to Model 2—the inherent demand in each county drives the allocation considerations more, regardless of services provided in prior years. However, in Model 3, counties that recently have provided more services would receive a little more in allocated funds relative to the demand in their county.

## Funding Allocation Study

### Fiscal Year 2020

#### **Base Funding**

The aim behind base funding is “to maintain system and service stability,”<sup>58</sup> meaning its role in an allocation methodology is to guarantee a stable level of access to TD services—within a county—for clients from one year to the next, or on a short-term basis. Adding a stabilizing component such as this to the allocation methodology prevents significant swings—up and down—in funding from one year to the next. In this way, base funding acts as a balance to formula funding that maximizes access over the long-term by continuously allocating funds most efficiently to where they appear to be most needed or most effectively used according to up-to-date data on population and number and length of trips.

By using the State Fiscal Year 1999-2000 allocation amount for “Base Funding,” the current allocation methodology values a county’s allocation from that year as the benchmark for determining how much variation in funding from year-to-year is desirable, or even acceptable. However, when the Commission voted in November 2019 to “hold harmless” and restore funding to the counties that experienced a decrease in their allocations from 2018-2019 to 2019-2020, the allocation levels from the most recent prior year were used as the benchmark.

While providing a stabilizing component in the form of an absolute amount in base funding provides a minimum level of funding that can be expected for a county in any given year, it does not as effectively provide a minimum threshold of loss that a county can expect from one year to the next; because the absolute amount’s stabilizing effect depends on its size relative to the total funding. The smaller a county’s absolute base amount is relative to its overall allocation, the greater the potential for a county to experience significant swings in funding from one year to the next. Benchmarking an absolute allocation amount anchored to a year further in the past effectively guarantees that the base amount will comprise a smaller portion of a county’s allocation over time, whether overall funding for the program increases over the same period or even if a particular county’s allocation increases.

To mitigate the severity of the swings in funding permitted by the current allocation methodology, base funding can: 1) comprise a larger portion of the total allocation for every county, and/or 2) be benchmarked to allocation amounts from a more recent year. To accomplish this on an ongoing basis, an alternative method could be employed that effectively updates the base amount of funding from one year to the next—that is, a county’s base funding could be determined by its statewide share of allocations from the year immediately prior.

#### Base Funding as another Variable in Formula Funding

By determining a county’s base funding according to its most recent statewide share of allocations, not only would the base funding comprise a consistent portion of the total funding over time, it also would effectively be calculated in the exact same manner as the three variables used in the formula. This presents an opportunity to simplify the allocation methodology by removing the conceptual distinction between “Base Funding” and “Formula Funding” by simply using base funding as a fourth variable in the formula. The tables below (**TABLES 6A, 6B, and 6C**) show how this would work, using the “hold harmless” 2019-2020 allocation amounts as base funding.

---

<sup>58</sup> Rule Chapter 41-2.014(5)(a), Florida Administrative Code (F.A.C.). The rule can be accessed on the Florida Department of State website at: <https://www.flrules.org/gateway/ruleNo.asp?id=41%E2%80%90902.014>.

Fiscal Year 2020

## ANALYSIS OF VARIABLE INTERACTION

### Overview

While the previous section analyzed how weighted totals are calculated for each variable and how each variable contributes to a final allocation amount for a county, this section presents simplified weighted totals for a hypothetical two county example in order to further understanding of how the different variables (TD Population, Miles of Public Roads, T&E Grant Trips, and Prior Year Allocation) interact with and balance each other.

### Starting with TD Population as a Variable for Inherent Demand

Providing transportation services to the TD population starts with measuring this population in a comprehensive and reliable way. Dividing up allocations based on the TD eligible population in each county is a simple and straightforward start to determining the resources that should be made available for one county relative to another.

Below is the start of the hypothetical two county example with *County A* and *County B*. A total of \$1 million in total funding is available to be allocated between them. *County A* has a TD population of 80,000, which is four times the size of *County B*'s TD population of 20,000. As a county's share of statewide TD population is the sole determinant (or variable) considered in this beginning hypothetical scenario, *County A*'s share of the available funding comes to \$800,000 or 80 percent, and *County B*'s share of available funding comes to \$200,000 or 20 percent.

TWO COUNTY EXAMPLE OF HOW VARIABLES INTERACT: STARTING WITH POPULATION AS A VARIABLE FOR INHERENT DEMAND									
COUNTY	WEIGHTED STATEWIDE SHARES BY VARIABLE	MODEL 1 FACTORS		MODEL 2 FACTORS		MODEL 3 FACTORS		TOTAL FUNDING AVAILABLE	
	INHERENT DEMAND	TD Population	100.0%	TD Population	100.0%	TD Population	100.0%		\$ 1,000,000
	TD Population							MODEL 1	MODEL 2
County A	80,000	80.0%		80.0%		80.0%		\$ 800,000	\$ 800,000
County B	20,000	20.0%		20.0%		20.0%		\$ 200,000	\$ 200,000
TOTAL	100,000	100.0%		100.0%		100.0%		\$ 1,000,000	\$ 1,000,000

## Funding Allocation Study

### Fiscal Year 2020

#### Adding CLM as a Variable to Inherent Demand

Looking at population alone is limited in terms of estimating demand for transportation in one county compared to another. Populations that are more spread out require longer travel in order for transportation from one destination to another to occur. A more complete picture of transportation demand can be obtained by considering population within the context of population density. Measuring population density by centerline miles (CLM) considers such density in terms of developed land where public transportation occurs.

TWO COUNTY EXAMPLE OF HOW VARIABLES INTERACT: ADDING CENTERLINE MILES (CLM) AS A VARIABLE TO INHERENT DEMAND										
COUNTY	WEIGHTED STATEWIDE SHARES BY VARIABLE		MODEL 1 FACTORS		MODEL 2 FACTORS		MODEL 3 FACTORS		TOTAL FUNDING AVAILABLE	
	INHERENT DEMAND		TD Population	50.0%	TD Population	50.0%	TD Population	50.0%	MODEL 1	MODEL 2
	TD Population	Centerline Miles	Centerline Miles	50.0%	Centerline Miles	50.0%	Centerline Miles	50.0%		
County A	80,000	3,000	70.0%	50.0%	70.0%	50.0%	70.0%	50.0%	\$ 700,000	\$ 700,000
County B	20,000	2,000	30.0%	50.0%	30.0%	50.0%	30.0%	50.0%	\$ 300,000	\$ 300,000
TOTAL	100,000	5,000	100.0%	50.0%	100.0%	50.0%	100.0%	50.0%	\$ 1,000,000	\$ 1,000,000

The hypothetical two county example is expanded above to add consideration of CLM along with TD population. *County A* has a total of 3,000 CLM and *County B* has a total of 2,000 CLM. Although *County A*'s TD population is four times the size of *County B*'s, (80,000 compared to 20,000), *County B* has more CLM per TD individual at 0.1 compared to *County A* at 0.0375 CLM per TD eligible individual:

*County A:*       $3,000 \text{ CLM} \div 80,000 \text{ TD eligible} = 0.0375 \text{ CLM per TD eligible}$   
*County B:*       $2,000 \text{ CLM} \div 20,000 \text{ TD eligible} = 0.1000 \text{ CLM per TD eligible}$ 
}
**County A has 37.5% the CLM per TD eligible that County B has**

A higher CLM per TD eligible individual is indicative of a lower population density. In other words, more miles per person is equal to fewer persons per mile. This is more plainly demonstrated by doing the same calculation with the variables reversed:

*County A:*       $80,000 \text{ TD eligible} \div 3,000 \text{ CLM} = 26.67 \text{ TD eligible per CLM}$   
*County B:*       $20,000 \text{ TD eligible} \div 2,000 \text{ CLM} = 10.00 \text{ TD eligible per CLM}$ 
}
**County B has 37.5% the TD eligible per CLM that County A has**

Because *County B* has more CLM per TD eligible individual (i.e., a lower population density) compared to *County A*, adding the CLM variable to the two county example increases *County B*'s share of the \$1 million total in available funding and reduces *County A*'s share—even though *County A* has more CLM overall. *County A*'s share of the total available funding drops from \$800,000 (80 percent) to \$700,000 (70 percent), and *County B*'s share rises from \$200,000 (20 percent) to \$300,000 (30 percent).

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**Adding Invoiced Trips as a Performance Variable**

*County A* now accounts for 70% of inherent demand and *County B* accounts for the remaining 30% of inherent demand. Next, adding Trip & Equipment Grant invoiced trips as a variable for performance then raises the issues of: 1) what the purpose of performance is in the context of inherent demand, and 2) vice versa, what the purpose of inherent demand is in the context of performance.

The hypothetical two county example is once again expanded below to include consideration of Trip & Equipment Grant invoiced trips as a variable for performance, balanced against the inherent demand variables of TD population and CLM. Both *County A* and *County B* provide 10,000 trips each—the exact same level of performance. This means that *County B* accounts for 50% of performance and 30% of inherent demand, so it has greater performance relative to its demand. The reverse is true for *County A*, which accounts for 50% of performance and 70% of inherent demand, so it has greater inherent demand relative to its performance.

TWO COUNTY EXAMPLE OF HOW VARIABLES INTERACT: ADDING INVOICED TRIPS AS A PERFORMANCE VARIABLE										
COUNTY	WEIGHTED STATEWIDE SHARES BY VARIABLE			MODEL 1 FACTORS		MODEL 2 FACTORS		MODEL 3 FACTORS		TOTAL FUNDING AVAILABLE
	INHERENT DEMAND		PERFORMANCE	TD Population	25.0%	TD Population	12.5%	TD Population	37.5%	\$ 1,000,000
				Centerline Miles	25.0%	Centerline Miles	12.5%	Centerline Miles	37.5%	
	TD Population	Centerline Miles	Invoiced Trips	Invoiced Trips	50.0%	Invoiced Trips	75.0%	Invoiced Trips	25.0%	
<i>County A</i>	80,000	3,000	10,000	60.0%		55.0%		65.0%		\$ 600,000
<i>County B</i>	20,000	2,000	10,000	40.0%		45.0%		35.0%		\$ 400,000
<b>TOTAL</b>	<b>100,000</b>	<b>5,000</b>	<b>20,000</b>	<b>100.0%</b>		<b>100.0%</b>		<b>100.0%</b>		<b>\$ 1,000,000</b>

- 1) ***Inherent Demand in the context of performance:*** *Counties with more unmet demand should receive more funding relative to their performance in order to help meet that unmet demand. In other words, they should receive more funding per trip provided in order to help them provide more trips.*

To satisfy the first criteria above, *County A*'s total statewide share of the available allocation (still \$1 million) needs to be greater than 50%. That is, because *County A* has more unmet demand, it should receive more relative to its performance (or more funding per invoiced trip compared to *County B*).

***County A (Model 1)***

$$\begin{aligned}
 &\text{INHERENT DEMAND:} && (70\% \text{ DEMAND} * 50\% \text{ WEIGHT}) + \\
 &\text{PERFORMANCE:} && (50\% \text{ PERFORMANCE} * 50\% \text{ WEIGHT}) = \\
 &\text{COUNTY B's SHARE:} && 60\% \text{ OVERALL}
 \end{aligned}$$

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

A simple calculation of overall funding divided by invoiced trips further demonstrates that *County A* is receiving more funding per trip to help with meeting unmet demand:

County		Model 1
County A:	\$600,000 ÷ 10,000 invoiced trips = \$60.00 per invoiced trip	
County B:	\$400,000 ÷ 10,000 invoiced trips = \$40.00 per invoiced trip	
County		Model 2
County A:	\$550,000 ÷ 10,000 invoiced trips = \$55.00 per invoiced trip	
County B:	\$450,000 ÷ 10,000 invoiced trips = \$45.00 per invoiced trip	
County		Model 3
County A:	\$650,000 ÷ 10,000 invoiced trips = \$65.00 per invoiced trip	
County B:	\$350,000 ÷ 10,000 invoiced trips = \$35.00 per invoiced trip	

- 2) ***Performance in the context of inherent demand:*** *Counties that have more performance (i.e., provided more services, or more access) relative to their inherent demand should receive more funding relative to their inherent demand. In other words, they should receive more funding per TD eligible/CLM in order to reward and further incentivize a higher level of trips provided to the TD eligible population.*

To satisfy the second criteria above, *County B*'s total statewide share of the available allocation needs to be greater than 30%. That is, because *County B* has more performance relative to inherent demand (i.e., less unmet demand), it should receive more funding relative to its size.

***County B (Model 1)***

$$\begin{array}{ll}
 \text{INHERENT DEMAND:} & (30\% \text{ DEMAND} * 50\% \text{ WEIGHT}) + \\
 \text{PERFORMANCE:} & (50\% \text{ PERFORMANCE} * 50\% \text{ WEIGHT}) = \\
 \text{COUNTY B's SHARE:} & 40\% \text{ OVERALL}
 \end{array}$$

A similar simple calculation of overall funding divided by the demand variables helps to demonstrate that *County B* is receiving more funding relative to its size as a reward for greater performance.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

County	Model 1 (TD Eligible)	Model 1 (CLM)
County A:	$\$600,000 \text{ CLM} \div 80,000 \text{ TD eligible} = \$7.50 \text{ per TD eligible}$	$\$600,000 \text{ CLM} \div 3,000 \text{ CLM} = \$200.00 \text{ per CLM}$
County B:	$\$400,000 \text{ CLM} \div 20,000 \text{ TD eligible} = \$20.00 \text{ per TD eligible}$	$\$400,000 \text{ CLM} \div 2,000 \text{ CLM} = \$200.00 \text{ per CLM}$
County	Model 2 (TD Eligible)	Model 2 (CLM)
County A:	$\$550,000 \text{ CLM} \div 80,000 \text{ TD eligible} = \$6.88 \text{ per TD eligible}$	$\$550,000 \text{ CLM} \div 3,000 \text{ CLM} = \$183.33 \text{ per CLM}$
County B:	$\$450,000 \text{ CLM} \div 20,000 \text{ TD eligible} = \$22.50 \text{ per TD eligible}$	$\$450,000 \text{ CLM} \div 2,000 \text{ CLM} = \$225.00 \text{ per CLM}$
County	Model 3 (TD Eligible)	Model 3 (CLM)*
County A:	$\$650,000 \text{ CLM} \div 80,000 \text{ TD eligible} = \$8.13 \text{ per TD eligible}$	$\$650,000 \text{ CLM} \div 3,000 \text{ CLM} = \$216.67 \text{ per CLM}$
County B:	$\$350,000 \text{ CLM} \div 20,000 \text{ TD eligible} = \$17.50 \text{ per TD eligible}$	$\$350,000 \text{ CLM} \div 2,000 \text{ CLM} = \$175.00 \text{ per CLM}$

\* Although County A has higher overall funding per CLM in Model 3, County B still has much higher relative funding per TD eligible in the same Model, so the criteria is still satisfied.  $(\$17.50 \div 8.13) = 2.15 > (216.67 \div 175.00) = 1.24$

Models 2 and 3 demonstrate the shifts toward and away from inherent demand and performance as each is given more or less weight. Model 2 gives more weight to performance and less weight to inherent demand (75% to 25%), so *County A*'s overall share drops to 55 percent while *County B*'s overall share rises to 45 percent. Model 3 gives less weight to performance and more weight to inherent demand (25% to 75%), so *County A*'s overall share rises to 65 percent while *County B*'s overall share drops to 35 percent. The more weight that is given to performance, the closer *County A*'s overall share nears 50 percent (its share of performance), and the closer *County B*'s overall share reaches to 50 percent (its share of performance). The more weight that is given to demand, the closer *County A*'s overall share reaches toward 70 percent (its share of inherent demand), and the closer *County B*'s overall share stays near 30 percent (its share of inherent demand). Among other insights provided by the hypothetical two county example, the differing weights on performance and inherent demand between Models 2 and 3 demonstrate how what is best for one county is inevitably worse for another county, and vice versa.

County	Inherent Demand	Performance	Which is Greater?	What Criteria is Needed?	Statewide Share %			Criteria Satisfied?		
					Model 1	Model 2	Model 3	Model 1	Model 2	Model 3
County A	70%	50%	Inherent Demand	Overall Funding > Performance	60%	55%	65%	YES	YES	YES
County B	30%	50%	Performance	Overall Funding > Inherent Demand	40%	45%	35%	YES	YES	YES

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**Adding Prior Year Allocation as a Base Funding Variable**

Following the introduction of the performance variable (invoiced trips) to balance against inherent demand, *County A* faces a minimum overall share of the total allocation of 55% in Model 2 and a maximum overall share of 65% in Model 3, with Model 1 offering an intermediate overall share of 60%. Mirroring this scenario for *County A*, *County B* faces a maximum overall share of the total allocation of 45% in Model 2 and a minimum overall share of 35% in Model 3, with Model 1 again offering an intermediate overall share of 40%. Among the possibilities presented by the three models to *County A* and *County B*, the overall shares of the total allocation amount for both fall within a range of 10% each.

The hypothetical two county example is expanded on below for one final time to add consideration of each county's allocated share of the prior year available funding as a variable for base funding. *County A*'s statewide share of prior year allocations amounts to \$700,000 or 70%, and *County B*'s statewide share of prior year allocations amounts to \$300,000 or 30%.

TWO COUNTY EXAMPLE OF HOW VARIABLES INTERACT: ADDING PRIOR YEAR ALLOCATION AS BASE FUNDING VARIABLE												
COUNTY	WEIGHTED STATEWIDE SHARES BY VARIABLE				MODEL 1 FACTORS		MODEL 2 FACTORS		MODEL 3 FACTORS		TOTAL FUNDING AVAILABLE	
	INHERENT DEMAND		PERFORMANCE	BASE FUNDING	TD Population	Centerline Miles	TD Population	Centerline Miles	TD Population	Centerline Miles	MODEL 1	MODEL 2
	TD Population	Centerline Miles	Invoiced Trips	2019-2020 Allocation	Invoiced Trips	19-20 Allocation	Invoiced Trips	19-20 Allocation	Invoiced Trips	19-20 Allocation		
<i>County A</i>	80,000	3,000	10,000	\$ 700,000	65.0%		62.5%		67.5%		\$ 650,000	\$ 625,000
<i>County B</i>	20,000	2,000	10,000	\$ 300,000	35.0%		37.5%		32.5%		\$ 350,000	\$ 375,000
TOTAL	100,000	5,000	20,000	\$ 1,000,000	100.0%		100.0%		100.0%		\$ 1,000,000	\$ 1,000,000

*County A* faces overall statewide shares of 60%, 55%, and 65% in Models 1, 2, and 3 before any consideration of adding base funding, which translates to facing relative losses of -10%, -15%, and -5% since it had an overall share of 70% the year prior. By adding the base funding variable at a 50% weight, these loss thresholds for each model are reduced by 50% to -5%, -7.5%, and -2.5% respectively.

The situation for *County B* once again mirrors that of *County A* in that it faces overall statewide shares of 40%, 45%, and 35% in Models 1, 2, and 3 before any consideration of adding base funding, which translates to facing relative gains of +10%, +15%, and +5% since it had an overall share of 30% the year prior. By adding the base funding variables at a 50% weight, these gain thresholds for each model also can be reduced by 50% to +5%, +7.5%, and +2.5% respectively.

County A	70%	65%	-5.0%	67.5%	-2.5%	50%
County B	30%	35%	+5.0%	32.5%	+2.5%	50%

By adding this base funding variable at a 50% weight, the possible overall shares of the total allocation amount for both *County A* and *County B* presented by the three models narrows from a 10% range (55% - 65% and 45% - 35%) to a 5% range (62.5% - 67.5% and 37.5% - 32.5%). Just as this range is narrowed by 50% with the base funding variable weighted at 50%, the range would also be narrowed by 10% with the base funding variable weighted at 10%, and narrowed by 90% when weighted at 90%, etc. In this sense, the base funding variable effectively acts as both a floor and a ceiling (relative to the overall appropriation) on changes in funding from one year to the next in terms of counties' overall statewide allocated percentages.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## FINAL RECOMMENDATIONS

### **Recommendations for Implementation**

Based on the findings from this study and much of the feedback received from stakeholders through the public workshops and other avenues, this report recommends the Commission for the Transportation Disadvantaged (CTD) consider the following changes and strategies to implement a new allocation methodology within the Trip and Equipment Grant program. These recommendations, if approved, are intended to assist CTD in codifying these changes in Rule 41-2.014, F.A.C., and aligning other policies and procedures pertaining to the distribution of Trip and Equipment Grant funds.

#### **Recommendation 1 – Amend the Current Methodology to include the Four Proposed Variables in Rule 41-2.014, F.A.C.**

**The Commission for the Transportation Disadvantaged should amend the Trip and Equipment Grant allocation methodology in Rule 41-2.014(5), F.A.C., to include the four variables proposed by this study, effective July 1, 2021.**

The study proposes four variables that use more *precise* estimates or measures of demand, performance, and base funding with the current allocation methodology. Each of these variables are intended to align the methodology with the intent of the Transportation Disadvantaged program, established in Chapter 427, F.S., to support the cost-effective provision of transportation services by qualified Community Transportation Coordinators (CTCs) to the TD population within their county. The variables include:

- 1) **TD Eligible Population** – While the current methodology accounts for *total* population (including individuals who are not transportation disadvantaged) as a variable that measures inherent demand, CTD can use the U.S. Census Bureau’s American Community Survey 5-year estimates to allocate funding more directly to a county’s TD eligible population (individuals living with a disability, persons living below poverty, and adults who are 65 or older).
- 2) **Centerline Miles (CLM)** – The study considers public road mileage data from the Federal Highway Administration as an alternative variable to county square miles within the current methodology. This would serve as a more precise measurement of a county’s overall demand for transportation services by considering the miles traveled by residents to access activities within their community. CTD can accomplish this by allocating funding based on a county’s share of statewide centerline miles.
- 3) **Trip and Equipment Grant (“Non-Sponsored”) Services** – The current methodology measures performance of CTD funded services, but also accounts for *systemwide* trips and miles reported in the Annual Operating Report (AOR) that are “sponsored” by other agencies. At a more granular level, CTD can more directly allocate funds for the provision of non-sponsored TD services, which are reimbursed by the Trip and Equipment Grant program. This can be accomplished by replacing the AOR with the invoice data submitted by CTCs on “non-sponsored” services as an alternative (and more consistent) measurement of performance within the formula.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

- 4) **Base Funding** – While the current methodology provides a stabilizing component in the form of an absolute amount (i.e., a county’s base amount from FY 1999-2000), it does not provide a minimum threshold of loss a county can anticipate from one year to the next. CTD can use an alternative approach by updating the base amount each year based on a percentage threshold of the county’s total allocated amount from the year immediately prior. CTD can also simplify this approach by adding the base as a variable within the formula.

**Recommendation 2 – Adopt Performance-Based Model 2 but with higher weight for Base Funding**

**To reward and incentivize performance and the cost-effective provision of TD non-sponsored services, the Commission should implement a model that gives greater weight to the proposed performance variable reflected in the Trip and Equipment Grant invoice data and less weight to the proposed inherent demand variables of TD Population and Centerline Miles (CLM). Also, to provide more year-over-year stability and predictability of funding, the same model should give a majority of its weight to the base funding variable reflected in allocation amounts from the year immediately prior.**

Model 2 reinforces the guiding principle of “COORDINATION” – the mission of the TD program – which is defined as “the arrangement for the provision of transportation services to the transportation disadvantaged in a manner that is cost-effective, efficient, and reduces fragmentation and duplication of services.”<sup>59</sup> The proposed performance variable within this study supports this purpose by replacing the AOR with the Trip and Equipment Grant invoice data and allocating grant funds solely for the purpose of delivering TD non-sponsored services. Model 2 also enhances the guiding principles of “ACCOUNTABILITY” and “TRANSPARENCY” by granting a higher percentage of the allocation to the system’s performance and validating it with consistent, accurate data.

If Model 2 were to be adopted as presented by this study, 37.5% of the total amount appropriated for the Trip and Equipment Grant would be allocated for the CTCs’ performance from the previous fiscal year (see Recommendation 4 regarding provisions for exceptions). For the remaining funds, 50% would be allocated for the statewide base variable, 6.25% would be allocated for the state’s TD eligible population, and 6.25% would be allocated for the state’s centerline miles. However, **this report is recommending that the statewide base variable be increased to 60%, which would leave performance from the previous fiscal year at 30%, the TD eligible population at 5%, and the centerline miles at 5%.** By weighting the base funding variable at 60%, the new methodology will ensure that base funding comprises a larger portion of every county’s allocation than is currently the case.

In addition to allocating a greater percentage of funds to the performance variable, CTD should adopt the proposed weights given to the units of services (trips, miles, and bus passes) provided in the Trip and Equipment Grant invoice data. The rule language should specify that the weights for the trips and miles should be reflective of the unit costs (rates) of delivering these services, as presented by the study. For bus passes, the study proposes these services be given higher weight than their average relative rates to incentivize TD riders to use when appropriate and available. This is because “bus passes are the most cost-effective means of providing transportation for people who are in proximity to a fixed route and are able to ride a bus.”<sup>60</sup>

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

In response to stakeholder feedback, requesting fixed-route trips and miles be considered within the allocation formula, bus passes reimbursed under the Trip and Equipment Grant are based on the number of days – ***NOT*** number of trips – allotted for eligible riders. The cost of the pass does not change based on how many trips are taken by a rider within the allotted days. Furthermore, “actual” fixed bus route trips are not reported in the grant invoice data because those services are provided to the general public under the Federal Transit Administration (FTA) and other programs. For these reasons, CTD should not consider fixed-route trips and miles within the performance variable of the Trip and Equipment Grant allocation methodology.

#### **Recommendation 3 – Raise Percentage of Base Variable Even Higher for First Year of Implementation**

**To ensure a smooth transition of the new formula, the Commission should phase-in the implementation by weighing the base variable at 80% for the first year. This will allow sufficient time for CTCs to adjust to the new changes and for CTD to explore additional policy changes pertaining to performance of the Trip and Equipment Grant (discussed in Recommendation 5).**

In SFY 2019-2020, CTD returned to using the allocation methodology in Rule 41-2.014, after two years of implementing changes through legislative proviso. This transition resulted in several local systems experiencing sudden financial losses. In response to this sudden impact, CTD restored funding to the counties that experienced a decrease in allocation to prevent further reductions of services in SFY 2019-2020. The Florida Legislature continued this funding for one more year (SFY 2020-2021) to hold the system harmless while CTD adopts a new allocation methodology in rule.

During the public workshops, some stakeholders expressed concerns over a similar scenario occurring with the new allocation methodology and requested a floor and cap be included for the first few years of implementation to “phase-in” the new formula. The proposed base variable addresses these concerns by preventing sudden, significant gains and losses in allocations from year-to-year. Implementing a floor or cap (in addition to a base) would both duplicate and complicate this effort. However, the base variable could be raised to a level higher than 60% for the first year to “phase in” the new methodology.

It is recommended CTD implement this “phase-in” approach, by setting the base variable to 80% for the first year of implementation (SFY 2021-2022), then lowering it to 60% thereafter. This approach will allow CTCs one year to plan for and adjust to changes to their allocations. This also would allow time for additional examination of the invoice data and identification of any additional policy or procedural changes needed to further align the reimbursement process with the allocation formula.

#### **Recommendation 4 – Allow for Flexibility to Respond to States of Emergency**

**When developing rule language, the Commission should allow for flexibility in determining the year of data used in each variable in determining allocations for each fiscal year. Though the most current year of data should be the common practice, there may be external events in any given year that would adversely impact allocations, such as a global pandemic or hurricane. Under these circumstances, the rule language should allow for the Commission to use data from a different year not affected by extraordinary events.**

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

In 2020, the State of Florida implemented stay-at-home orders and social distancing regulations in response to the COVID-19 Coronavirus. As with most sectors of the U.S. economy, the global pandemic has negatively impacted the public transportation industry. In response to the reduction in demand for TD services, CTD implemented a rescue plan within the Trip and Equipment Grant to mitigate some of the corresponding financial losses incurred by the system. The “rescue” amount was based on the percentage of the difference in TD revenue reported on a CTC’s monthly invoice compared to its monthly Trip and Equipment allocation.

Although CTD’s rescue plan has effectively mitigated short-term financial losses from the reduction of TD services due to COVID-19, it does not address the anticipated impact these service reductions (reflected in the invoice data) will have on allocations for the upcoming fiscal year. Some stakeholders have requested CTD delay the implementation of the new formula for another year in response to COVID-19. Unfortunately, this approach would have a more negative impact on the system as the legislative “hold harmless” funding is expected to expire on June 30, 2021, which would result in many CTCs experiencing significant reductions in allocations based on their AOR data from SFY 2019-2020.

In addition to raising the percentage of the base variable for the first year (Recommendation 3) to allow the system time to transition into the new allocation formula, CTD should use the invoice data from SFY 2018-2019 to allocate performance funding based on pre-COVID-19 service levels. Further, it is recommended the rule language allow for this flexibility in selecting data from any given year to respond to similar statewide emergencies in the future, such as a major hurricane.

#### **Recommendation 5 – Align Reimbursement Process with New Allocation Formula**

**In addition to implementing a formula that prioritizes performance, the Commission should examine its existing policies and procedures pertaining the reimbursement of grant funds to ensure they align with the intent of the new allocation methodology. This should include an in-depth analysis of invoice data, rate structures, and potential improvements to the Annual Operating Report.**

This study attempts to address many of the goals of the Transportation Disadvantaged program, particularly as they relate to the “COORDINATION” of transportation services to the TD population, by designing an allocation methodology that ties funding to these expectations. As a performance-based approach, the proposed methodology provides a framework for CTD to promote a more cost-effective provision of non-sponsored transportation services across the state. But the methodology can only go so far in accomplishing these goals.

As stated in the preface of the “CURRENT ALLOCATION METHODOLOGY,” this study distinguishes between the allocation versus the disbursement of funding. The grant funds are not actually disbursed (i.e., paid) until *after* services are rendered by the CTC. The costs associated with these services are largely determined by the rates used to reimburse CTCs under the Trip and Equipment Grant. Though the study encourages the cost-effective provision of services by allocating funding solely for trips, miles, and bus passes reimbursed under the grant program, CTD should re-examine the rate structure to ensure the payments for these services align with the intent of the proposed methodology.

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

In addition to the rate structure, CTD should organize and streamline its invoice data to be more consistent and presentable prior to the implementation of the new formula. An example where consistency is needed is the mileage captured in the invoice data: some CTCs report the total passenger miles, while others report total vehicle miles or direct miles (i.e., the direct length between the pick-up and drop-off location). In terms of making the invoice data “presentable,” CTD should organize the data in a similar format to the Annual Performance Report and include a new stand-alone section for this data in the same report.

CTD should also re-evaluate the role of the Annual Operating Report in measuring the performance of the broader Coordinated Transportation Disadvantaged System. This will likely require a thorough analysis of the reporting methodology to determine what is needed to improve the quality and accuracy of data. Until these issues can be addressed, CTD should rely on Trip and Equipment Grant invoice data as the primary dataset within the Annual Performance Report to the Governor and Legislature.

Finally, some of the stakeholder feedback could not be addressed by this study as it pertained to the reimbursement process. One such issue pertained to the Americans with Disabilities Act (ADA) requirement on fixed-route systems to provide complimentary paratransit services for persons with disabilities who live within the fixed-bus route corridor. Currently, CTD does not reimburse for these services because Trip and Equipment Grant funds are expressly prohibited from being used “to supplant or replace funding of transportation disadvantaged services which are currently funded to a grantee by any federal, state, or local governmental agency.”<sup>61</sup> The Florida Public Transportation Association (FPTA) and other stakeholders have requested the CTD reconsider this policy prior to the adoption of a new formula (see FPTA letter in Appendix E).

## APPENDIX – A (Invoice Weighting)

### Weighting for Trips and Miles

Below (left) are the Trip and Equipment Grant Program Rates from 2018-2019 for trips and miles for Ambulatory, Wheelchair, Stretcher, Group per Passenger, and Group per Group. Also below (right) are the rates relative to the rate for ambulatory trips or miles. These relative rates are primarily determined through service differentiation factors calculated by Thomas Howell Ferguson to provide CTCs a consistent approach to differentiation between the costs of the four different service types. Service differentiation factors are based on average number of minutes of load/unload time for picking up and dropping off clients for each service type.

TRIP & EQUIPMENT GRANT PROGRAM 2018-2019 RATES										
COUNTY/COUNTIES	Ambulatory		Wheelchair		Stretcher		Group Per Passenger		Group Per Group	
	Trip	Mile	Trip	Mile	Trip	Mile	Trip	Mile	Trip	Mile

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

#### Weighting for Bus Passes

Below are the Trip and Equipment Grant Program Rates from 2018-2019 for the different bus passes. Ambulatory rates are also shown in this table for purposes of comparison. Compared to rates for the four different service types above, rates for bus passes vary more widely. For every type of bus pass (monthly, 10 day, weekly, daily, single trip), the proposed weights in this report exceed the maximum relative cost for that pass found statewide in order to incentivize their use as “the most cost-effective means of providing transportation for people who are in proximity to a fixed route and are able to ride a bus.”<sup>62</sup>

COUNTY	Ambulatory		TRIP & EQUIPMENT GRANT PROGRAM 2018-2019 BUS PASS RATES												
	Trip	Mile	Monthly	Monthly-Reduced	Monthly Express	Monthly Express-Reduced	Monthly-Other	10 Day	10 Day-Reduced	Weekly	Weekly-Reduced	Weekly-Other	Daily	Daily-Reduced	Single Trip

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## APPENDIX – B (Invoice Totals for Counties)

### Totals for Service Designated Areas with Multiple Counties

Trip and Equipment Grant invoice data is collected by designated service areas, and therefore is in some instances submitted by CTCs that have multiple counties comprising a designated service area. For the 2018-2019 state fiscal year, there were five such instances of this:

1. Columbia, Hamilton, and Suwannee
2. DeSoto, Hardee, Highlands, and Okeechobee
3. Glades and Hendry
4. Holmes and Washington
5. Orange, Osceola, and Seminole

For these counties specifically, the Initial Report of this study totaled the counties' weighted Trip and Equipment Grant invoice performance based on which county each trip originated in. Based on feedback through the public workshops and following subsequent additional analysis of the invoice data, this Final Report adopts a different method for dividing up weighted totals within designated service areas.

### Final Report Method

Many trips in the Trip and Equipment Grant program are to a destination and back. Trips such as these that cross county boundaries can skew the performance of certain counties within a designated service area that includes multiple counties if the origin of the trip is the determining factor with where to assign credit and the return trip's origin falls outside local boundaries. Trying to compare the performance of counties that fall under the same designated service area also seems counterintuitive.

Instead of dividing up weighted Trip and Equipment Grant invoice totals by which county each trip originated in, this Final Report simply divides up the performance metric for a designated service area by each county's share of TD population and centerline miles (CLM) within that same designated service area. Through this method, the performance of a designated service area still determines allocations for its counties in the aggregate, but not by each county individually within the service area.

### Example of Glades-Hendry Designated Service Area

<u>Glades-Hendry Designated Service Area</u> <u>Invoice Totals</u>			
Ambulatory		Wheelchair	
Trips	Miles	Trips	Miles
8,455	186,815	4,398	59,400

<u>Glades and Hendry</u> <u>TD Population and CLM</u>			
Glades		Hendry	
TD Population	CLM	TD Population	CLM
5,787	387.521	16,704	621.675

<u>Glades Invoice Totals</u>			
Ambulatory		Wheelchair	
Trips	Miles	Trips	Miles
2,711	59,902	1,410	19,046

<u>Hendry Invoice Totals</u>			
Ambulatory		Wheelchair	
Trips	Miles	Trips	Miles
5,744	126,913	2,988	40,354

Funding Allocation Study  
Fiscal Year 2020

## APPENDIX – C (Capital Equipment Purchases)

### Consideration of Capital Equipment Purchases in Invoice Data

#### *Reasons for leaving out capital equipment purchases*

The models presented in this final report do not factor capital equipment purchases made by CTCs. There was only one instance of a county (Manatee County) purchasing capital equipment in 2018-2019, and to add this factor into the Trip and Equipment Grant invoice data would add a level of complexity for something that is relatively rare. Also, capital equipment purchases in no way contribute to the current allocation methodology used by the program.

#### *Reasons for including consideration of capital equipment purchases*

This Final Report recommends a new allocation methodology that gives added weight to CTCs' performance in the Trip and Equipment Grant program. To mitigate concerns CTCs' may have between purchasing needed equipment and not sacrificing their performance, the capital equipment purchases could be credited with a level of performance comparable to what was achieved with the invoiced total for trips, miles, and/or bus passes. For example, if a CTC provided 1,000 trips and invoiced \$100,000 for those trips, then a capital purchase of \$1,000 could be credited with the equivalent of 100 trips. Or the capital equipment purchase could be given partial weight (between 0.0 and 1.0) such as 0.5 to where the trips total to just 50. An example of how this would work is provided below.

### CAPITAL EQUIPMENT PURCHASE FORMULA

#### *Initial Weighted Trip Count +*

*{ [ Billed Amount for Capital Equipment \* ( Initial Weighted Trip Count ÷ Billed Amount Trips/Miles/Passes ) ] \* Weight Given to Capital Equipment }*

#### EXAMPLE 1: 900 Trips provided at \$100 per Trip and Capital Equipment Fully Counted

Allocation Amount	Billed Amount Trips/Miles/Passes	Billed Amount for Capital Equipment	Initial Weighted Trip Count	Weight Given to Capital Equipment	FINAL WEIGHTED TRIP COUNT
\$ 110,000.00	\$ 100,000.00	\$ 10,000.00	1,000.000	100.0%	1,100.000

#### EXAMPLE 2: 900 Trips provided at \$100 per Trip and Capital Equipment Partially Counted (counted 50%)

Allocation Amount	Billed Amount Trips/Miles/Passes	Billed Amount for Capital Equipment	Initial Weighted Trip Count	Weight Given to Capital Equipment	FINAL WEIGHTED TRIP COUNT
\$ 110,000.00	\$ 100,000.00	\$ 10,000.00	1,000.000	50.0%	1,050.000

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## APPENDIX – D (OVERAGE)

### Consideration of Overage in Invoice Data

#### *Reasons for leaving out invoiced trips/miles/passes beyond the allocated funding*

This Final Report recommends a new allocation methodology that incentivizes CTCs to count as many non-sponsored trips, miles, and/or bus passes as they can. By not allowing CTCs to count trips, miles, and/or bus passes that are provided beyond what can be reimbursed with their allocated amount, the new methodology provides a strong incentive for CTCs to lower their reimbursement rate. By not allowing for this type of overage, the new methodology will maximize both access and cost-effectiveness.

#### *Reasons for including invoiced trips/miles/passes beyond the allocated funding*

Not allowing CTCs to count non-sponsored trips, miles, or bus passes that are provided beyond what can be reimbursed by their allocated amounts disincentivizes continuing to provide access to transportation after allocated funding has been used up and could result in more trip denials. With the AOR data being used in the current allocation methodology, this type of “overage” is being counted at least in concept.

#### *Partial counting of overage*

If a CTC with a \$100,000 allocation provided 1,100 trips at \$100 a trip and invoiced \$110,000 total for those trips, the total overage would amount to \$10,000. At \$100 a trip, this overage amount would be equivalent to 100 trips. To not count any overage, these 100 trips could be removed entirely from the initial trip count of 1,100 (see Example 1). To the extent overage is not counted, the stronger the incentive for CTCs to reduce their rates. However, to the extent overage is counted, the stronger the incentive continue providing access to transportation even after an allocation is all spent (see Example 2).

### FORMULA

#### *Initial Weighted Trip Count -*

*{ [ Overage Billed Amount \* ( Initial Weighted Trip Count ÷ Total Billed Amount ) ] \* Weight Given to Overage Reduction }*

#### EXAMPLE 1: 1,100 Trips provided at \$100 per Trip and No Overage Allowed

Allocation Amount	Total Billed Amount	Overage Billed Amount	Initial Weighted Trip Count	Weight Given to Overage Reduction	FINAL WEIGHTED TRIP COUNT
\$ 100,000.00	\$ 110,000.00	\$ 10,000.00	1,100.000	100.0%	1,000.000

#### EXAMPLE 2: 1,100 Trips provided at \$100 per Trip and Partial Overage Allowed (counted 50%)

Allocation Amount	Total Billed Amount	Overage Billed Amount	Initial Weighted Trip Count	Weight Given to Overage Reduction	FINAL WEIGHTED TRIP COUNT
\$ 100,000.00	\$ 110,000.00	\$ 10,000.00	1,100.000	50.0%	1,050.000

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

## APPENDIX – E (PUBLIC FEEDBACK)

### **Feedback Gathered through Email and CTDAllocationStudy.com**

#### **Proposed Demand Variables**

##### **Use of TD Eligible Population to Replace Total Population**

- “I would use different weights for those who are at targeting higher risk populations.”
- “I support the use of “TD population” as opposed to general population for use in the allocation formula. We need to narrow the scope to identify those that are truly eligible and in need of the services. Many data sets can be used in identifying this subset.”

##### **Use of Centerline Miles to Replace Use of Geographic Square Miles**

- “Different weights for different categories of roads like functional classifications and/or number of lanes would be difficult to weigh differently.”
- “Public Roads variable. I support this variable.”

#### **Proposed Performance Variables**

##### **Use of AOR Data vs Use of T&E Invoice Data**

- “While it is desirable to encourage greater participation by purchasing agencies, the funding formula is not the place or the vehicle to address this. The funding formula should determine a fare allocation of funds to counties based on their need for transportation disadvantaged service[s] and the costs associated with that need. Individual CTCs cannot have the amount of funding they receive vary based on purchasing agency participation, and in the end TD funds are for services not funded already by purchasing agencies, whether or not they participate in the coordinated system. It is strongly suggested that this goal [coordination] be separated from the funding formula process.”
- “In my several years in Business Development for MV Transportation as well as Senior Staff member of the Commission for the Transportation Disadvantaged, I have reviewed countless Annual Operating Reports and have been dismayed at the lack of consistent, accurate data that is submitted. Particularly in smaller, not for profit agencies serving as the Community Transportation Coordinator (CTC), I have observed wide swings in reporting data from year to year and disparities on how certain categories are interpreted for submission of data. The goal of having revenues and expenses “match” in order to demonstrate a not for profit status does not accurately reflect how the system is being operated and ultimately skews the reality of the operation. There does not exist a thorough examination or audit of this data, and disparities are not aggressively challenged by the CTD. The result of this is that when using AOR data for two of the four subsets of TD allocation distribution we are relying on data that has not been clearly vetted and verified, making the process inherently flawed.”

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

- “Using mileage does not accurately reflect the cost of doing business. Average trip length strictly for TD trips is a much better reflection of understanding the operating environment. Many urban counties have the advantage of using several funding sources for transporting passengers throughout the county but rely on TD trips for longer distance trips that are in the less densely populated areas outside of ADA corridors. Another reason this factor is important is that many rural counties do not have medical facilities (including frequently visited dialysis clinics) in the county and must go into adjacent urban counties for services. The result is that these are very long mileage trips that also have down or wait times for the returns because of the distance from base. The variables must be taken into consideration when calculating allocations to appropriately fund these underserved areas.”
- “Return to using the total trips reported in the AOR, rather than utilizing only the T&E Grant trips, as it is a disincentive to coordination and punishes those counties who overmatch the TDTF dollars. For example, CTC’s that work closely their LCB and the local community to bring in more coordination contractors and other state agencies into the coordinated system (which generally would reduce the per cost trip to the CTD), will now be penalized against CTC’s who only coordinate the TDTF Funding.”

Mile Weights Relative to Trip Weights in Invoice Data

- “I believe these weights [miles relative to trips at 0.1] are appropriate.”
- “We think weighting associated with mileage is good the way it is (0.1).”

Bus Pass Weights in Invoice Data

- “Adjust the T&E Grant Invoice to include the number of trips allotted to each Fixed Route Bus Pass. By utilizing only the invoiced T&E trips, the full trip allocation of Fixed Route Bus Passes is not included on the invoice and is only calculated when the AOR is reported to the CTD. FPTA recommends the T&E invoice be altered to allow CTC’s to report the number of trips associated with the bus passes that are sold.”
- “PSTA would like to see weight assigned to bus passes significantly increased above 10. While it is fairly accurate that a fixed-route bus trip is approximately 1/10th the cost of a[n] individual door to door ambulatory trip, this low weight doesn’t account for the fact that every monthly bus pass provides dozens of rides, not just one ride. For example, PSTA provides an average of 55 trips per monthly bus pass per validated data.”

**Proposed Base Funding**

At Proposed Variable Weight of 50%

- “I believe it is appropriate [at 50% weight] and probably more important to larger counties so they can calculate their ability to operate within their target area. A larger county will have greater incurred cost.”

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

- “Continue with one of the formula’s that has a 50% Base funding, set at 2019/2020 levels, to ensure some type of continuity and to reduce the large swings up or down in allocations that occur when removing the base.”

5% Ceiling and 5% Floor

- “We understand the issues of balancing, trade offs, and competing priorities, but any funding formula that could result in more than 3-5% reduction of grant dollars to the particular CTC would cause a ripple effect of unmet trips and lapses of coordination.”
- “The CTD should consider a phased-in approach by setting a cap at the percent a county can increase or decrease each year for the first three or five years to stabilize drastic increases or decreases among the individual counties. For example, no county may receive more than a 5% increase/decrease for three years, to reduce the immediate reductions a county may experience. As shown by the impact of budgetary proviso language previously used that immediately changed the funding allocations and resulted in loss of TD services in some Counties. We recommend a phased implementation to any funding model modification to provide ample time for CTC’s to plan what modifications would be needed to minimize service loss to customers.”
- “Delay the implementation of this formula to the 2022-2023 Fiscal Year, due to the following reasons:
  - The COVID-19 pandemic has greatly affected the operation of every transit system in Florida, using trip numbers for this fiscal year will be an anomaly.
  - Many transit systems operate on differing fiscal years, please delay the implementation date to allow for enough time for the individual system’s budget processes to adjust accordingly.
  - The continued hardship that fixed route counties are currently having to abide by, with the limitation on how they spend the TDTF dollars within the ADA Corridor, which is negatively affecting T&E Grant trip totals.”

**Other Issues**

Consideration of Overage Trips

- “If an agency is doing more TD eligible trips (paid for by local dollars) than can be invoiced due to the cost being higher than the monthly allocation, these additional trips should still be included in the formula calculation . . . there really isn’t a disincentive for ACCOUNTABILITY by localities by counting these excess rides because they are being paid for by scarce local funds, There is only a strong incentive to ensure ACCESS.”

Use of Rolling Multi-Year Averages for Variables other than TD Population

- “I think that using this method for other variable[s] may be beneficial.”

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

Definition of “Cost-Effective”

- “Thank you for posting this work. When will the definition of 'cost effective' be posted? I agree overall with the Guiding Principles but hesitate to completely embrace in the absence of the definition.”

**Feedback Gathered through Public Workshops** (edited for brevity and clarity)

**Proposed Demand Variables**

TD Population

- I’m concerned about the quality of data in the American Community Survey. Smaller counties have a larger margin of error when it comes to estimating their populations.

Centerline Miles (CLM)

- Centerline miles do not include miles of roads in gated communities. This puts certain counties at a disadvantage.
- I don’t see what CLM has to do with the cost of TD services.

**Proposed Performance Variables**

Mile Weights Relative to Trip Weights in Invoice Data

- We think the weights on the miles (0.1 relative to trips) are good as proposed.
- Smaller, more rural counties have many more miles to travel per trip. There are some counties where it is necessary to travel outside of the county for a considerable portion of the trips. The methodology should give more weight to miles than is proposed (at 0.1).

Bus Pass Weights Relative to Trip Weights

- We ask that bus pass trips be counted. Otherwise, bus passes will not be incentivized.
- We would like to see the weights for bus passes increased to above 10.0 as proposed. The cost being what it is for these passes, they provide lots of trips for the TD population.
- Bus passes are not being used enough currently. The new methodology should provide more incentive for their use.

Use of AOR Data vs Use of T&E Invoice Data

- We understand moving away from the AOR data and only counting CTD trips in the methodology, but are concerned this will disincentivize the collection of AOR data from coordination contractors.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

- We do feel that not using the AOR data anymore will disincentivize coordination and punish counties that overmatch their Trip and Equipment Grant dollars.

**Proposed Models (Models 1, 2, and 3)**

Model Preference

- We really support the performance-based Model 2 because we think it reflects the demand for TD services and not just access. It more directly ties to the actual TD services provided with that funding.
- Model 2 is our preference. It rewards and encourages good performance for CTCs that provide better access to CTD services.

**Proposed Base Funding**

General

- You need some sort of a base funding in order to have a true safety net and make sure that essential necessities are covered in the state.
- We ask that you move forward with a model with 50% weight for the base funding to provide consistency from year to year and reduce large swings in funding across the state. We would also like for a phased-in approach where counties cannot lose or gain more than 5% each year in the first 3-5 years.
- We ask that this new methodology be delayed until the 2022-2023 fiscal year due to COVID-19 in the current year.

**Other Issues**

Counting Overage

- Our county was told not to submit overage on our invoices so there are non-sponsored trips that we provided that will not show up in the invoice data for 2018-2019. Perhaps we can look at the AOR data but just the CTD trips in that dataset.
- Why not provide flexibility and count trips provided by local government because they are not sponsored by another program?

Delay Implementation

- We ask that this new methodology be delayed until the 2022-2023 fiscal year due to COVID-19 in the current year.

**Letters Submitted**

August 13, 2020

David Darm  
Executive Director  
605 Suwannee Street, MS-49  
Tallahassee, Florida 32399-0450

Dear Mr. Darm:

We would like to thank you and the Commission for the thoughtful effort that has been put in the Funding Allocation Study and the opportunities to provide input. The Heartland Regional Transportation Planning Organization serves as the Designated Official Planning Agency for two rural services areas, DeSoto, Hardee, Highlands, and Okeechobee Counties and Glades and Hendry Counties. Without funding from the Transportation Disadvantaged program, the residents of these counties would not have vital transportation for life-sustaining trips.

We want to share the following concerns with the proposed allocation models and provide you the feedback requested on the proposed performance variable based on the intent of the Transportation Disadvantaged Trust Fund:

- **American Community Survey Data:** Utilizing ACS data seems like a more precise measure than the general population, however in less populated rural counties, the data becomes less reliable as the survey size is smaller, even in the 5-year estimates. For example, the margin of error for Lafayette County for individuals under 18 with a disability is +/- 23 while the reported number of those individuals is 22. Census.gov states, "Statistics from all surveys are subject to sampling and non-sampling error. Sampling error is the uncertainty between an estimate based on a sample and the corresponding value that would be obtained if the estimate were based on the entire population (as from a census). Measures of sampling error are provided in the form of margins of error for all estimates included with ACS and PRCS published products. The Census Bureau recommends that data users incorporate this information into their analyses, as sampling error in survey estimates could impact the conclusions drawn from the results."

Instead of relying on ACS data that is a projection based on a survey, we would support the use of data sources that account for individuals actively seeking resources based on the TD criteria as a more accurate indication of need. Suggested sources include Supplemental Security Income (SSI) and Social Security Disability Insurance (SSDI) Recipients by County, Food Assistance Program (SNAP) Recipients, and population based on the most recent decennial census.

- **FHWA Public Road Mileage Data:** Centerline miles is not indicative of the demand or the costs related to TD Trips. When this opinion was previously shared, a response defending the use of the data as a way to balance the large variation in population and bring "balance" to the formula for less populated counties. While this is appreciated, that still does not mean the centerline miles of a county indicated the need or cost of transportation for the TD eligible population.

In a 2005 Technical Memo prepared by the Center for Urban Transportation Research (CUTR), population density was identified as a data point that "can significantly impact both TD service delivery and cost. In general, transportation service will be more expensive to provide in less dense and/or larger (and area) counties."

- **Trip and Equipment Grant Trips:** As the reliability of AOR data has been in question, the use of T&E Grant trips is potentially a more reliable indication of the use of funding and performance. This indication of “performance” does not factor the inherent differences between the types of operational models used to deliver the TD Services. CTC’s are limited by the amount of funding they have, and trips denied due to lack of funding do not seem to be accounted for. As urban areas have more funding and trip costs are lower, they can provide more overall trips, thereby, increasing their TDTF funding when all trips are counted. Considering the number of trips a CTC provides with T&E Grant funding in the funding allocation is essentially reinforcing those with more funding and less expensive trip models will continue to receive larger allocations.

We question what the purpose of this data provides to the funding allocation model. A more indicative factor maybe if a CTC spends their total allocation each year.

- **Base Funding:** While the stability of the system and a gradual transition to the new funding allocation is critical, this exercise in evaluating the funding allocation study has less validity as 50% of the model is based on an old model that evaluated the same factors that most parties have agreed should be updated.

“Transportation disadvantaged” means those persons who because of physical or mental disability, income status, or age **are unable to transport themselves or to purchase transportation** and are, therefore, dependent upon others to obtain access to health care, employment, education, shopping, social activities, or other life-sustaining activities, or children who are handicapped or high-risk or at-risk as defined in s. 411.202. Considering this definition of Transportation Disadvantaged, it is imperative that the number and costs of transportation options are included in demand as the ability to access transportation is a critical factor. In rural areas there are frequently no available options to coordinated TD service.

Considerations and factors to ensure the T&E Grant dollars are being used for the intended purpose of providing transportation for life-sustaining activities that is otherwise not available or affordable, we would propose the following for consideration:

- Actual cost per trip
- Existing public transit service area and/or funding
- Rural Area of Economic Opportunity designation and/or Areas of Persistent Poverty
- Base funding for administration that considers the existing transit administration capacity of each CTC without T&E Grant funding

#### **In response to the specific questions asked in the email sent August 5:**

- *Should miles be given more weight or less weight?* Invoice miles in relation to the number of trips is an important factor. A “trip” could be one mile or one-hundred miles. Miles should be given more weight.
- *Should the funding model consider trips (and miles) that exceed the allocated amount for a given month?* Yes, however reported trip denials should then also be considered.

We appreciate the evaluation detail but feel there are fundamental and systematic differences between systems with fixed-route transit and rural systems that are not addressed. We believe addressing this issue is important in developing a fair and equitable funding formula for all.

Thank you for your consideration of our concerns and, as always, we look forward to continually seeking cost effective solutions to serve transportation disadvantaged Floridians. If you have any question, please call me at 863-838-9762.

Sincerely,

Marybeth Soderstrom  
Transportation Director

Re: Transportation Disadvantaged (CTD) Funding Allocation Study

Dear Mr. Darm:

The Miami-Dade County Department of Transportation and Public Works (DTPW) has reviewed the Florida Commission for the Transportation Disadvantaged (CTD) Funding Allocation Study – Fiscal Year 2020. We appreciate the numerous opportunities the CTD has provided to the Community Transportation Coordinators (CTC) to provide some comments and feedback. DTPW would like to provide the following comments for the CTD to consider:

- DTPW is the largest public transit system in the State of Florida and the 15<sup>th</sup> largest in the U.S. Based on the Data Table 1A-1 provided in the CTD Funding Allocation Study (Study), the county with the highest TD population is Miami-Dade County with over 900K. Our TD Bus Program enrollment exceeds the TD funding allocation by more than half every year which translates into high percentage of unmet needs.
- Over the last several years, DTPW has experienced a significant decrease in Trip and Equipment funds. Starting in 2016, when CTD determined that our Americans with Disabilities Act (ADA) program was ineligible for TD funds because it was considered sponsored our TD funding dropped 33% from \$9.7M to \$6.5M. Furthermore, the Legislative Proviso within the Florida General Appropriations Acts of 2017-2018 impacted DTPW's TD allocation by 27% from \$6.5M to \$4.7M. Based on the current Study, all the proposed formula models, Miami-Dade County's allocation amounts continue to be reduced (Model #1 -11%, Model #2 -9.96%, Model #3 -12.35%) based on 2019-20 allocation (\$6,951,484).
- Because of the situation with the ADA limit, Miami-Dade County DTPW has zero's for 10 of the 15 weighted "Invoice Trip" factors, because we are not allowed to bill any door-to-door trips in the whole county. How can CTD reconcile omitting this important data which would shows a true depiction of Miami-Dade County's contribution to providing services to the majority of the TD population within the State of Florida?

In the final analysis, DTPW would like to provide the following suggestions to the CTD to consider as part of the Study's determination:

1. CTD should consider a delay in the implementation of this formula to the 2022-2023 State Fiscal Year due to the COVID-19 pandemic which has greatly affected the operation of every transit system in Florida Implementation of the funding change now would not depict an accurate account of services provided compared to prior years.
2. Allow the use of total trips to report in the AOR rather than what is paid for by TDTF funding, it is a disincentive to CTC's who have a high percentage of unmet needs and who work with a large number of coordination contractors. If a transit agency has the technology to provide and account for trips with

bus passes, it should be allowed to include the number of trips in invoice and those trips should be considered in the allocation formula (this shows a true depiction and accountability of TD services provided).

3. Allow the inclusion of the number of trips allotted to each fixed route TD pass, the full allocation of fixed route TD passes is not included on the invoice and is only calculated when the AOR is reported to the CTD. If AOR data is removed, then allow overages to be included in the invoice to be given “credit” towards allocation formula.
4. Consider a phase-in approach by setting a cap at the percent a county can increase or decrease each year to stabilize drastic increases or decreases among individual counties (i.e., 5% +/-).
5. Continue with one of the formulas that has a 50% base funding, set at 2019/2020 levels to ensure stability, and reduce large shifts in allocation amounts.
6. Allocation Formula Model Proposals are very complicated, difficult to follow and formulate. We are unable to fully understand the totals for each of the proposed models as it pertains to Miami-Dade County. Could CTD and/or Thomas, Howell, Ferguson (THF) please populate the data inputs (not just totals) that derive to the final allocation amount for each of the proposed models for Miami-Dade County specifically?
7. Resolution policy to CTC’s whose TD programs have been relegated to fixed route because ADA program has rendered ineligible per CTD. Allow for fixed route systems to use a percentage of miles either through a base formula or a ratio to get “credit” for passenger miles (State/Federal Allocation Formula use NTD miles)
8. CTD must determine a resolution pertaining to FTA Civil Rights guidance earlier this year (January 2020) that addresses County ADA Programs as a Civil Right, not be considered a “Sponsored Program” and therefore should not be used to deny access to eligible recipients of state TD dollars. Based on prior Allocation Formula workshops, CTD has determined that the focus of this study should be based on allocations and bifurcate the relationship of Allocations and Disbursements. However, **“Disbursements” clearly affect “Allocations” and to not consider this would undermine one of the basic principles of the study, “Accountability”.** A funding model should include appropriate performance measures (not exclude), accompanied by a reporting system, to hold local systems accountable to state taxpayers.

DTPW respectfully requests that the CTD take the above-mentioned comments and suggestions into consideration in the Study’s final recommendations.

If you require additional information or have any questions, please feel free to contact Ed Carson at (786) 469-5545 or Mia Marin (786) 469-5061. Thank you for your consideration in this matter.

David Darm, Executive Director  
Florida Commission for the Transportation Disadvantaged  
605 Suwannee Street, MS 49  
Tallahassee, FL 32399-0450

Dear Mr. Darm:

A Committee of the Florida Public Transportation Association (FPTA) has reviewed the Florida Commission for the Transportation Disadvantaged (CTD) Funding Allocation Study - Fiscal Year 2020. We appreciate the numerous opportunities to provide comments and feedback that the CTD has given the transit industry. FPTA would like to provide the following suggestions to the CTD:

1. Continue with one of the formula's that has a 50% Base funding, set at 2019/2020 levels, to ensure some type of continuity and to reduce the large swings up or down in allocations that occur when removing the base.
2. The CTD should consider a phased-in approach by setting a cap at the percent a county can increase or decrease each year for the first three or five years to stabilize drastic increases or decreases among the individual counties. For example, no county may receive more than a 5% increase/decrease for three years, to reduce the immediate reductions a county may experience. As shown by the impact of budgetary proviso language previously used that immediately changed the funding allocations and resulted in loss of TD services in some Counties. We recommend a phased implementation to any funding model modification to provide ample time for CTC's to plan what modifications would be needed to minimize service loss to customers.
3. Return to using the total trips reported in the AOR, rather than utilizing only the T&E Grant trips, as it is a disincentive to coordination and punishes those counties who overmatch the TDTF dollars. For example, CTC's that work closely their LCB and the local community to bring in more coordination contractors and other state agencies into the coordinated system (which generally would reduce the per cost trip to the CTD), will now be penalized against CTC's who only coordinate the TDTF Funding.
4. Adjust the T&E Grant Invoice to include the number of trips allotted to each Fixed Route Bus Pass. By utilizing only the invoiced T&E trips, the full trip allocation of Fixed Route Bus Passes is not included on the invoice and is only calculated when the AOR is reported to the CTD. FPTA recommends the T&E invoice be altered to allow CTC's to report the number of trips associated with the bus passes that are sold.
5. Delay the implementation of this formula to the 2022-2023 Fiscal Year, due to the following reasons:
  - o The COVID-19 pandemic has greatly affected the operation of every transit system in Florida, using trip numbers for this fiscal year will be an anomaly.

- Many transit systems operate on differing fiscal years, please delay the implementation date to allow for enough time for the individual system's budget processes to adjust accordingly.
- The continued hardship that fixed route counties are currently having to abide by, with the limitation on how they spend the TDTF dollars within the ADA Corridor, which is negatively affecting T&E Grant trip totals.

FPTA greatly appreciates the support the CTD provides to all of the transit systems across the state. As stated in our last bullet above, the counties that operate fixed route service, and are designated as CTC's, still do not have resolution on internal policy changes implemented several years ago that have had a major effect on the ability of our fixed route transit systems to pull down the TD dollars that have been allocated to their respective counties. The two major changes were as follows:

- Lack of TD eligibility for passengers living within the Americans with Disabilities Act (ADA) service area and/or near fixed route service (unless they are traveling after hours or their origin/destination is outside the fixed route/ADA service area).
- Allowing only the passenger fare to be billed to the CTD if the customer lives within the ADA service area and/or near fixed route and cannot pay the fare.

Unfortunately, these changes above appear to have been made with:

- No input from CTC's.
- No approved policy or procedure and no discussion at the CTD Board level prior to this internal policy going into effect.
- Major discrepancies across the state, such as CTC's who do not operate fixed route service, and the rural area of counties with less than 50,000 in population have access to public transportation funding provided by FTA that is open to the general public (Section 5311 dollars) and they are not being asked to abide by the same rule in the rural area of their county.

As you know, after several verbal discussions with the CTD staff, and over the course of 4 years, FPTA decided to seek guidance from the Federal Transit Administration (FTA). The FTA Associate Administrator for Civil Rights responded on January 8, 2020 stating that the ADA is not a sponsored program, but is to be considered a comprehensive civil rights act. Therefore, the availability of ADA complementary transportation **should not be used to deny access to eligible recipients of state TD dollars**. Further, FTA cited 49 CFR 37.131(c)(4), which states that public transit operators may negotiate a fare that covers the cost of transporting a trip that should be sponsored by the CTD Program. Many of our fixed route systems have been struggling with the implementation of this policy due to the decrease in the ability to pull down TDTF funding. Now that FTA has issued their letter, **it is a high priority that this issue be resolved immediately by the CTD and prior to any change in funding allocation.**

FPTA respectfully requests that the CTD take into consideration the Funding Allocation Study recommendations made by FPTA, and further asks to rescind the informal TD policy affecting how systems may bill in the ADA corridor at a future CTD Board meeting. We thank you for your continued open dialogue on this subject and we hope to find a mutually beneficial solution very soon.

Please feel free to reach out to me at 850.445.8329 or [lisabacot@floridatransit.org](mailto:lisabacot@floridatransit.org) for any further clarification or information. Thank you.

Sincerely,

A handwritten signature in blue ink, appearing to read "Lisa Bacot", is placed over a faint, light blue rectangular stamp.

Fiscal Year 2020

## APPENDIX – F (SELECT RESPONSES)

This appendix provides the Final Report’s responses on select issues of feedback gathered through the three public workshops and the [ctdallocationstudy.com](http://ctdallocationstudy.com) website. The issues were selected based on limited opportunity to provide additional analysis on them during the public workshops.

### **Feedback on TD Population Variable**

#### **Margin of Error in the 5-Year ACS**

When it comes to measuring the TD population at the county level in a comprehensive and reliable way, we believe table C18130 from the 5-year American Community Survey (ACS) provides the most statistically sound estimates available. While the example was given about Lafayette County (the smallest county in Florida) having a margin of error (MOE) of +/-23 and an estimate of 22 for the population under 18 years old with a disability, this is a small subset of the total TD population being counted in the study. The total subsets of the TD population counted by this study for Lafayette County are as follows:<sup>63</sup>

<b>LAFAYETTE COUNTY</b>		
<b>Population</b>	<b>Estimate</b>	<b>MOE</b>
Under 18 Years, Disability	22	23
Under 18 Years, No Disability, Below Poverty	380	155
18 to 64 Years, Disability	516	167
18 to 64 Years, No Disability, Below Poverty	558	295
65 Years and Over	1,116	209
<b>Total TD Population</b>	<b>2,592</b>	<b>428</b>

This Final Report recommends that the inherent demand variables of TD population and centerline miles (CLM) function as peripheral factors to the performance variable captured in the invoice data. Inherent demand is something that must necessarily be estimated from county to county; that is, it is not something that can be precisely measured. Measuring (or estimating) it relative to performance, however, is important in that it helps to provide a sense of which counties have more unmet demand compared to other counties.

---

<sup>63</sup> The approximated MOE of 428 for the Total TD Population here is calculated according to the same methodology used in formula (2) under “Aggregating Data Across Population Subgroups” in the *General Data Users Handbook*, U.S. Census Bureau. Section 8. Pages 53-54. Available online at: [https://www.census.gov/content/dam/Census/library/publications/2018/acs/acs\\_general\\_handbook\\_2018\\_ch08.pdf](https://www.census.gov/content/dam/Census/library/publications/2018/acs/acs_general_handbook_2018_ch08.pdf). The same methodology for the approximating the MOE when aggregating subpopulations is demonstrated on slides 49-50 of the presentation “Using American Community Survey Estimates and Margins of Error” from April 19, 2017 by Jennifer Berkley of the Decennial Statistical Studies Division at the U.S. Census Bureau. Available online at: [https://www.census.gov/content/dam/Census/programs-surveys/acs/guidance/training-presentations/20170419\\_MOE.pdf](https://www.census.gov/content/dam/Census/programs-surveys/acs/guidance/training-presentations/20170419_MOE.pdf).

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

For the recommended models in Years 1 and 2 reflected in Table 8C of this Final Report, Lafayette County's calculated allocations are \$159,878.43 and \$155,890.03, respectively. If the county's assumed TD population of 2,592 were increased by the MOE of 428 to a new total of 3,020, then the same calculated allocations for Years 1 and 2 would change to \$159,958.37 (a difference of \$79.94) and \$156,049.89 (\$159.86), respectively. As percentages of the original calculated allocations, these differences of \$79.94 and \$159.86 amount to 0.1% and 0.05% each.

An additional reason for using the ACS to estimate the TD population is that the statute on TD eligibility is broadly written, and therefore looking at the population broadly is warranted. Attempting to estimate the TD population by measuring participation in other public assistance programs simultaneously runs the risk of both seriously undercounting certain persons (those not signed up for the selected programs) and seriously overcounting certain persons (those signed up for two or more of the selected programs). Table C18130 of the ACS avoids this complexity by providing unduplicated estimates of the TD populations identified in statute.

#### **Feedback on Centerline Miles (CLM) Variable**

##### **Private Roads and Gated Communities**

Data on centerline miles of public roads submitted by state departments of transportation to the Federal Highway Administration (FHWA) each year are included as part of the Highway Performance Monitoring System (HPMS). "Public road" is defined in 23 C.F.R. § 460.2(a)<sup>64</sup> as "any road under the jurisdiction of and maintained by a public authority and open to public travel." Despite this federal definition, "All roads open to public travel are reported in HPMS regardless of ownership, including Federal, State, county, city, and privately owned roads such as toll facilities."<sup>65</sup> County summaries in the HPMS include "information about the ownership of the roads (public or private), as well as jurisdictional responsibility for the road," but "only private roads that are open to public travel (e.g., toll bridges) are to be reported in HPMS."<sup>66</sup> "Open to public travel" is defined in 23 C.F.R. § 460.2(c)<sup>67</sup> "that the road section is available, except during scheduled periods, extreme weather or emergency conditions, passable by four-wheel standard passenger cars, and open to the general public for use without restrictive gates, prohibitive signs, or regulation other

# Florida Commission for the Transportation Disadvantaged

## Funding Allocation Study

### Fiscal Year 2020

than restrictions based on size, weight, or class of registration. Toll plazas of public toll roads are not considered restrictive gates.”<sup>68</sup>

*For HPMS purposes . . . While publicly operated and owned is a staple of public roadways, this is not required to be a valid public roadway . . . Ownership is reported in the HPMS report as Item 6. Ownership is reported in full extent for both rural and urban areas, for the National Highway System (NHS) and all functional classifications. Generally, this applies to only public roadways, however, privately owned roadways that are accessible to the public, must be reported on for ownership purposes.*<sup>69</sup>

Put simply, the distinction between public and private roads tends to be defined at the local level, and the FHWA will accept the submission of private roads data into the HPMS. In order to be counted, however, a road must be open to the general public—a criterion that gated communities do not meet.

This Final Report recommends the use of the CLM variable as a more precise alternative to the current variable of geographic square miles. These variables are both combined with population variables as a means of controlling for population density. Regardless of the inclusion or exclusion of miles of roads in restrictive gated communities, we still believe CLM to be a superior measure to geographic square miles for capturing population density as it relates to travel demand.

This Final Report also recommends that the inherent demand variables of TD population and CLM function as peripheral factors to the performance variable captured in the invoice data. As is noted above on the section discussing margin of error (MOE) in the ACS, inherent demand is something that at best can only be estimated, but is important to estimate to get a sense of how much unmet demand one county has compared to another.

For the recommended models in Years 1 and 2 reflected in Table 8C of this Final Report, Collier County’s calculated allocation are \$887,301.25 and \$861,385.24 respectively. If the county’s total miles of roads in gated communities was assumed to be equal to its total miles of Small Urban public roads (131.010 centerline miles) and added to the total, then the same calculated allocations for Years 1 and 2 would change to \$888,788.41 (a difference of \$1,487.16) and \$864,359.56 (a difference of \$2,974.32), respectively. As percentages of the original calculated allocations, these differences of \$1,487.16 and \$2,974.32 amount to 0.16% and 0.3% each.

Because the inherent demand variables function on the periphery, the final recommended model gives significantly much more weight to the performance variable measured through Trip and Equipment Grant invoice data. To the extent that longer drives are resulting from departures and arrivals happening within gated communities, this will be reflected in the mileage captured in the invoice data.

Florida Commission for the Transportation Disadvantaged  
Funding Allocation Study  
Fiscal Year 2020

**Feedback on Table of Invoice Data (Tables 4C and 7C)**

**Zeros for Weighted Invoice Trip Factors**

As part of stakeholder feedback, it was pointed out through multiple avenues that a particular county had zeros for eleven (11) out of the fifteen (15) Weighted Invoice Trip factors in Table 4C (also reflected in Table 7C in this Final Report). However, as is shown in the tables below, the majority of counties (39 out of 67) have zeros for 11 of the 15 factors. Just as a county like Miami-Dade does not count any ambulatory, wheelchair, stretcher, or group trips/miles like most counties in the state do, most counties in the state do not count bus passes like Miami-Dade does. This reflects the reality of Florida being a very large, very diverse state with different counties having different populations and transportation infrastructures and needs. Ultimately, applying different weights to trip factors (in particular the weights on miles) and bus passes is where these different needs are balanced against each other on the performance side, just as applying different weights between the TD population and CLM variables is where they are balanced against each other in the inherent demand side.

NUMBER OF WEIGHTED INVOICE TRIP FACTORS WITH A VALUE OF ZERO				Number of Zeros	Number of Counties
<i>Alachua</i>	11	<i>Lee</i>	11	11	39
